TOWERS

SELF-SUPPORTING UP TO 60 FEET HIGH
HOT DIP GALVANIZED HEAVY DUTY MODELS
ZINC ELECTROPLATED ECONOMY MODELS
NO LOST TOWER FOOTAGE
FAST, EASY SECTIONAL ERECTING

With these two Jontz Tower models you can fill any tower needs... from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Zinc Electroplated Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. The Hot Dip Galvanized Heavy Duty Model No. 500 will withstand hurricane force winds having been tested at wind loads of 80 mph.

Model No. 500 is self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 500 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

Both towers are fabricated in 10'0" sections and can be erected in one piece or by sections. Model 300 is made from 1¼"x18

ga. tubular uprights and is zinc electroplated and dipped in clear Butyrate lacquer. The Model 500 is made from 1¼" x 16 ga. tubular uprights and is hot dip galvanized.

New, extra-wide corrugated cross-braces give 75% more weld contact with uprights. Tower sections lock together with 2 self-locking ¾" bolts in each leg. The splined bolts prevent thread damage and stop hole stretch when tower moves in the wind.

HOW TO ORDER: 1. Specify if to be mounted in concrete or drive-in base. 2. Order by specific sections, starting at the base. See illustration for section numbers.

SHIPPING: For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles; unless otherwise specified. (Example: a 60 ft. tower will consist of section A, C, D, E, and 2 F's.)

Message-Mail Rack System

Total Systems Corp. manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The Mail (and Message) Rack Signal System is comprised of numbered pockets, one for each room with a push button light switch, or light and switch for each pocket. Each pocket is wired to a guest-room. When clerk files mail (or message) in pocket, he lights corresponding lamp; simultaneously, a duplicate lamp in the guest room lights, and advises guest he has a message at main desk.

Long-life bayonet lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front.

A new 2-Way model, No. A-MR2, with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest and for Telephone Operator to insert messages from the opposite side (and also signal the guest).

No. A-P20-3-A Signal Plate, in guest room, mounts on standard 1-gang outlet box.

The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with key slots.

If guest room is not wired for radio, a separate wall plate, A-P20-3-A, is provided for the signal lamp; otherwise, it can be included on the radio control panel or the TV Remote Control Unit.

They may be made for Flush-wall (recessed), Surface-wall or Desk (table-top) mounting. An easily removable end cover plate permits access to wiring. Power Supply unit (included) is controlled by a switch.

SPECIFICATIONS — Signal Mail/Message Racks

Standard finish, velvet black enamel. Material is steel. Standard pocket measurements: approx. 8" deep x 7 3/4" high (incl. 1 1/8" for Key Shelf, where used) x 2" wide. Specify whether wiring termination board is to be placed at left or right end of Rack.

'Total' TV Theft Controls

TV-set Theft Alarm is now available in designs that meet the needs of occupancies of any size; in addition to the **Model B**, for hotels of 50 rooms or more, there is the new **Model C**, for motels of under 50 room units.

Both models operate to signal any attempt to steal the television set it protects.

Installation may be made by any technician, following detailed instructions supplied with each System (Console, and Room Units). **Requires only one control wire per guest room.**

Operation: Equipment under protection (TV-set, appliance, etc.) is electronically protected. Any attempt to remove connection from wall outlet, or cut power cord, starts alarm signal. This signal is indicated at the Front Office as a flashing light, and loud buzz.

There is no alarm in the guest room to alert the thief, but the Front Office signal, once triggered, cannot be stopped until Front Office attendant has operated a Reset switch (which cancels buzz); a room indicator lamp remains lit, however, until house personnel has checked the guest room and restored the circuit to its normal alert condition.

Apartment House owners can now offer their tenants maximum security at negligible cost. Tenant is protected against an unlawful entry.

NEW SELF-CONTAINED TV THEFT ALARM. The TV-3 Theft Alarm mounts on the back of each TV set. Should anyone attempt to cut the power line, pull out the power plug or remove the Theft Alarm, an

extremely shrill piercing alarm is set off. The alarm, which is audible throughout the entire building, will run for about an hour. Two options are available to the owner. Option 1 requires the management's presence to shut the alarm off. Option 2 — If the plug is re-inserted in the receptacle, the alarm will shut off by itself. This option allows for a test of the alarm.

The TV-3 is held in place by screws. No internal connections have to be made to the set. All that's required is to plug the TV set's power cord into the TV-3 and then plug the TV-3 into any power receptacle.

NOTE: If Power goes off, Alarm will not be set off.

BELL**p/a****COMMERCIAL
SOUND EQUIPMENT****TRANSISTORIZED POWER AMPLIFIERS****FEATURES:**

- All silicon, solid state circuitry.
- Full automatic output circuit protection (with indicator light).
- Full bass and treble control.
- 4, 8 and 16 ohm output, bal. 25 & 70 V line.
- Available in package or rack mount.

GENERAL:

TPA Series amplifiers are heavy duty, full fidelity. Conservatively designed to meet the most extreme performance requirements within each power range. Special low-noise FET transistors in front end, and four feedback loops for super stable operation and low driving impedance. Rugged aluminum "beam" type chassis combines strength with light weight. Extremely efficient transistor design permits constant use with low power consumption.

OUTPUT CIRCUIT PROTECTION:

TPA Series amplifiers incorporate the exclusive, fully automatic Bell P/A sensor circuit which protects output transistors against overload or short circuit. Front panel amber light gives visual indication of any such condition. When condition is corrected, sensor circuit automatically and immediately restores amplifier to normal function. No manual reset or time delay required. This feature is invaluable when replacing amplifier in an old system where load and condition of wiring are not known, or in event of accidental shorting.

CONTROL FEATURES:

Full bass and treble controls, as well as master gain control on front panel permitting use of amplifier as power booster for tape playback, phonograph, tuner, or preamp. Two can be used for stereo systems. In a multi-function sound system, amplifiers can be adjusted to produce tonal quality required by each speaker array or to acoustical requirements of each particular area.

Input level to amplifier may be adjusted on rear panel to make unit compatible with nearly any program source.

Provision for a plug-in balanced 600 ohm input transformer makes this amplifier ideal for telephone paging systems or as a booster amplifier for paging with an intercom system.

MOD SERIES
Models MOD-90 and MOD-200

TRUE MODULAR AMPLIFIERS

FEATURES:

- 1 to 8 modular input preamps.
- Thousands of possible combinations.
- Hundreds of modular arrangements.
- Dozens of basic applications.

GENERAL:

The new Bell P/A MOD Series modular amplifiers incorporate the TPA Series in a unique package concept that makes possible a virtually unlimited number of applications. The new line provides unprecedented flexibility in modules. The new MOD amps are full fidelity, heavy duty construction; conservatively designed to meet the most extreme performance requirements within each power range. As in the TPA Series, Bell P/A's high standards of quality prevail throughout the new modular line.

INPUT MODULES:

Bell P/A MOD Series units are each equipped with one hi Z mic preamp (Model No. MMH-1) and one hi Z, high level, aux program preamp (Model No. PMH-1). Six other preamp modules* may be added, for a total of 8, to satisfy input requirements of nearly any installation. Modules are simple to install in field, requiring no special tools or wiring.

The "stacking" principle utilized in Bell P/A MOD Series permits unusual design flexi-

bility. Channel 1 (to extreme right, facing front of unit) is base channel, and all input modules are stacked to left. Special control modules, such as "priority paging" or "limiter" module, may be placed in any channel so as to mute or limit the gain of all inputs to the left of its position. In this way, it is possible to control from one to all seven other inputs.

When designing a system, it is recommended that MOD xx Basic be special-ordered with required input configuration. Completed unit will be shipped from factory, ready to operate.

* Input modules can be supplied with any standard audio input connector, on special order. For complete information on input modules and specifications, see individual module spec sheets.

MIXER-PREAMPLIFIERS

MXM-A MIXER-PREAMPLIFIER -20°C to +70°C (158 F).

Professional, broadcast quality, self-powered unit which accommodates 7 mixed input signals simultaneously (5 may be from high or low impedance mics). One mic. input converts to an equalized mag. phono cartridge or tape playback head. Two aux. (high imped., high level) are connected to a fader control. Bridging input accepts signals from a remote preamplifier or a zero level line. Up to 3 MXM-A's may be paralleled to provide 21 inputs (up to 15 mics.). Output level may be monitored aurally and visually by headset and built-in VU meter. Panel-controlled speech filters for all mic. inputs; separate bass and treble tone controls. Provision for converting high imped. to balanced low imped. microphone inputs by using plug-in transformers. Sockets accept remote control and precedence plug-in units. Panel-controlled calibrated low frequency (notch) filter effectively "tunes out" hum, turntable rumble, etc. Output: 20 V. into high imped. load at 1%; 4 V. into 600 ohms at 1%; (from bridging output) 0.1 V. into 1 Meg. Freq. Response: 18-38,000 Hz ±1 db. Output Imped.: high imped. (less than 3,000 ohms); 500/600 ohms with TL 600 (broadcast quality) plug-in transformer. BOOSTER AMPLIFIERS

BOGEN SOUND SYSTEMS

Bogen's booster amplifiers embody the most advanced developments in design and techniques of construction. These units deliver maximum power from a small package. They are ideal for sound systems in industrial plants, airports, stadia, schools ... wherever undistorted power is required. Note their exceptionally wide-range response characteristics. Built-in provision permits paralleling any number of power amplifiers to multiply power output. The Bogen models described below are ideal preamplifiers for these boosters.

The MO200A, MO100A, MT100 and NTB250 units are unsurpassed for both PA and industrial uses. Their 115-volt output makes them adaptable to unique applications. With a variable frequency audio generator input, they represent relatively inexpensive power sources — any frequency or voltage within their power range — capable of driving servos, motors, vibration(shake) tables, ultrasonic equipment. The unique all-silicon transistor model MT100 may be operated from a 12-16 VDC source as well as from 117 VAC; NTB250 may be operated from a 24 VDC source. Highly flexible in combination, inputs of identical amplifiers can be paralleled; outputs can be wired in series or parallel to provide any reasonable voltage or power (except MBT60 outputs). No case is furnished with MO200A.

- 6 Separate 2-Way Conversations Simultaneously
- Selective Paging with Reply • Push-Button Channel Selector
- Start a System with any number of Masters and Staffs

Provides selective communication. Each Master is equipped with a 6 or 12-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 6 separate conversations may be held simultaneously, with 12 Masters. Masters can talk with any station in system; can also set up conferences.

Wireless Staff Stations are for use where calls need not be originated, but where reply must be made. They are available for operation on any single channel desired—to match that of Master. They also can be used to receive Paging Calls from any Selective Wireless Master in the system . . . use as many Wireless Staffs as needed (all Staffs must operate on same channel for this

purpose). Two or more Wireless Staffs on the same channel will function as a 2-Station System (without Master); they can originate calls and reply to each other.

Start a system with any number of Masters and Staffs. Where up to 12 stations are used, each on a separate channel, Master can converse selectively with any channel. If more than 12 stations are used, channels must be shared; stations on same channel will receive all calls to that channel. To change location, merely pick up unit and move . . . no rewiring or new installation is necessary. All stations are equipped with the original TALK-A-PHONE UNI-TRANS feature, which permits continuous one-way transmission for periods when you wish to dictate or "listen-in."

How to Determine Cable Requirements. To inter-connect Master Stations, measure from first Master to second Master only, from second to third Master only, etc., until the last unit in the system is reached, and total. For K-C-4920 and K-CRP-5920, use two lengths of 6226 Cable; and for K-C-4930 and K-CRP-5930 use three lengths of 6226 Cable, etc. To connect K-C-41, K-C-42 or K-HP-3 Staff Stations, measure from Staff Station to the one Master to which Staff Station originates calls. To connect the K-C-42 Staff Station measure a separate length of cable from Staff Station to each Master Station to which Staff originates calls (for each K-C-41 or K-C-42, follow same procedure). Connect K-S-111 at any convenient point between remote speaker and Master Station.

TALK-A-PHONE Apartment House Intercom System.
With 1 or 2 selective talking circuits; with 1 or 2 independent door opener buttons. Catalog available.

One Model Meets Every Requirement

Setting a high standard in quality, design and performance, the TALK-A-PHONE "CHIEF" and "CHIEF REDI-POWER" meets the intercom needs of office, factory, institution, or any other commercial or private application. "CHIEF" Master Stations of 6, 12, 20, 30, 40 or 50 station capacity can be intermixed with "CHIEF REDI-POWER" Masters of different capacities, together with Staff Stations and Horns within the same system in any desired combination. Masters can talk with any other Master or Staff . . . page . . . and can utilize other optional equipment shown as well. Staffs can answer any Master and can originate calls to one Master, or to two Masters selectively.

TALK-A-PHONE ALL-TRANSISTOR "CHIEF REDI-POWER" MASTERS
These units have all the operational features of the "CHIEF," plus the additional feature of built-in extra power (up to 30 watts) for use when and as needed. Provides additional volume for calling many stations at once, or noisy locations singly. Needs no separate power booster, which would eliminate return speech. Return speech is received at normal room volume. REDI-POWER Masters have a self-compensating amount of volume, whether you call 2, 10 or 20 stations simultaneously. Each station receives its pre-determined volume with no division of output as you call more stations at once. Use REDI-POWER Masters with "CHIEF" Masters and Staffs in same system. Add K-RW-10 or K-RW-20 and REDI-POWER Masters can page any group of stations with a single selector button. Paged stations can also be used for intercommunication. Operates on 120 volts, AC only. PORTABLE
LOUDSPEAKERSTR
SERIES

Newcomb makes many types of portable loudspeakers for use with Newcomb Portable Combination Transcription Player/Public Address Systems. They vary in portability, directivity, efficiency, and frequency response. For example, the column speaker is highly directive, but not nearly as easy to carry as the compact S-212 Series models. The KN-200 reproducer combines widest frequency range with highest efficiency and exceptional intelligibility. The N-12 Series speakers are highly efficient, directive, intelligible and portable. All are excellent instruments, built to withstand rough treatment. Construction and finish matches player units.

ON THIS PAGE ARE SHOWN THE VARIOUS LOUDSPEAKER MODELS USED WITH NEWCOMB TR SERIES SYSTEMS

MODULAR
PUBLIC ADDRESS
AMPLIFIERS

CUSTOM
SERIES **K**

MODULAR PUBLIC ADDRESS AMPLIFIERS OF THE VERY BEST QUALITY

Flexibility and performance without equal are provided by Newcomb Custom K Series public address amplifiers. "Custom" has a very real meaning in this instance. Within minutes you can assemble exactly the right combination of channels, power and features to custom fit a particular situation. You are not faced with the hours of assembly labor and testing necessary with conventional modular designs. You simply select the Newcomb Custom K mixer/preamplifier with the number of channels — three, four, or five — you need. Then choose the power amplifier module — 40, 60, or 125 Watts — needed for the location. Drop the power amplifier into the preamplifier chassis. Two plug-in connections. No soldering. Drive a few sheet metal screws and you're in business. Take your choice of a well-ventilated cabinet cover or a rack panel mount. A VU meter accessory with a phone jack is available and can be quickly added to any front end. A remote control accessory is available for the four-channel module.

Any preamplifier may be used as a mixer by itself by inserting a Model P Power Supply instead of a power amplifier module. Any power output module becomes a straight power amplifier when it is mounted in the Newcomb Model KB Booster Chassis. The Newcomb Custom K modular system is so simple and straightforward that it's a wonder public address

amplifiers weren't made this way to begin with.

All modules are completely interchangeable.

The latest developments in vacuum tube technology and skilled hand craftsmanship are united to produce superb performance. Performance of Newcomb Custom K Series amplifiers has no equal. They operate with extremely low distortion at all power levels, supply unusually high useful power, run unbelievably cool. Vacuum tube design was chosen for the Custom K Series because no other method of amplification today provides the same combination of maximum performance, stability, reliability, extended life, and outright value. With vacuum tubes, repairs are easier and faster to make, cost less.

Visually, Custom K Series assemblies are exceedingly handsome, finished in soft, light shades of green. The control panel is slanted for convenient operation either seated or standing, and it is well illuminated. Custom K Series models abound with such refinements as movable reference markers on all knobs. To cut in a voice filter you simply pull the appropriate mixer knob. To kill feedback, pull tone control knobs. When you're out to prove what you can do, when you're putting in a model job, a job you'll be proud to put your nameplate on, that's the time to build with Newcomb Custom K.

70 COMBINATIONS FROM 14 UNITS

The modular concept makes it possible for you to get exactly the features you need without delay. Four chassis and four power units combine to form 15 basic assemblies. The VU meter may be added to 12 assemblies. 8 models (K4R assemblies with and without VU meter) become remote-control units with the addition of the RB4 accessory. All 35 may be rack panel mounted or covered for free-standing use. (UL requires that they be purchased with one or the other.)

SPECIFICATIONS — K3, K4R, K5 MIXER-PREAMPLIFIERS

All of the Newcomb Custom K mixer-preamplifier modules have space at the back of the chassis into which may be inserted either a Model 400, 600 or 1250 power amplifiers or the Model P power supply. Power is normally supplied to the front end by the power amplifier module; Model P is used when the preamp section is to be used as a separate mixer-control unit. Mixer models differ principally in the number of input channels. Each has one mike channel that is convertible by switch to use with a magnetic or ceramic phono pickup (preamp provides full RIAA response curve) or with a flat tuner or tape input. **Outputs:** 2 from each of two cathode followers, one before and one after the master control. Maximum output from followers: 10 volts into high impedance load. **Distortion:** less than 1/2%. D.C. on all filaments. **Frequency response:** ±1 db 20-20,000 cycles. **Bass tone control range:** -18 db to +18 db. **Low frequency roll off:** 3 db at 100 cycles, -12 db at 20 cycles. **Treble tone control range:** -18 db to +18 db. **High frequency roll off:** 3 db at 5,000 cycles, -12 db at 20,000 cycles. **Microphone impedance:** 2 megohms convertible to low impedance by Newcomb hum-free plug-in transformer. **Input volts required for 1 volt output from cathode followers:** Mikes, .0028 volts, gain 54° db, 2 megohms. **Magnetic,** .0022 volts, 100,000 ohms. Equalized to full RIAA curve. **Ceramic pickup,** .086 volts. Equalized to RIAA curve. **Tuner or Tape input (Aux.),** .34 volts, 1/2 meg., gain 6.4° db. *Gain stated is with 1 meg. output load. With 600 ohm output using TR-100 add 13 db. **Hum below 10 volts output (inputs shorted):** Mikes, -80 db. **Magnetic pickup,** 70 db. **Aux. input,** -80 db. **All controls off,** -100 db. Socket supplies power for VU-2T volume indicating meter. Note: K4R provides for remote control of all inputs. **Dimensions,** all models: 17" x 13 3/8" x 7 3/8" (height dimension includes KC cover). **Weight,** all models: 7 pounds. SPECIFICATIONS — 400, 600, 1250 POWER AMPLIFIER MODULES

The power amplifier modules in Newcomb's Custom K Series are not usable alone; they must be installed in a K3, K4R, or K5 mixer-preamplifier chassis. If they are to be used simply as a booster amplifier, they can be mounted in a Model KB Booster Chassis. Circuits in all power amplifier modules are resistance-capacity coupled, screen-regulated, with fixed bias and inverse feedback. They include power supply for K3, K4R, and K5 preamps. All have an a.c. outlet and an external fuse post. All three models have some identical specifications: **Input impedance:** 1 megohm convertible to low impedance with hum-free plug-in line or bridging transformers. **Output impedances:** 4, 8, and 16 ohms to a terminal strip and two octal sockets; 25 and 70 volts balanced or unbalanced line to one octal socket. **Hum and noise:** 80 db below steady state power rating.

**TX-10 SERIES STEREO TAPE RECORDERS**

Essentially a machine for the perfectionist, the TX-10 is probably the most foolproof and easiest-on-tape stereo recorder made. It takes any size reel — 3" to 10 1/2". Cybernetically engineered, tape transport is controlled with a single central joystick. It permits sound-on-sound recording, can be monitored before or after recording, has three heads, four-digit counter, stainless steel tape guides, hysteresis motor, differential braking, pointer-to-pointer illuminated meters which show both recording and playback levels. The TX-10 is a two-speed machine — 7 1/2 and 3 3/4 ips — selected by push button with speed-frequency correction. (15/7 1/2 ips machines available on special order). Response is ± 2 db 30-18,000 cps at 7 1/2 ips. There are separate "mike" and "line" inputs and mixing controls for each channel, a balance control, a ganged volume control, pilot light. It accepts Cannon XLR-3-12C male connectors and has easily accessible sockets for Newcomb plug-in transformers to permit use of low impedance microphones.

ATLAS SOUND

ATLAS SOUND PAGING AND TALK BACK SPEAKERS

HU and CJ models are equipped with the "Versalock" mounting bracket. Rigid, rugged, dependable bracket is completely adjustable on both a horizontal and vertical plane, affording "pin-point" directivity and simple secure mounting. HU horns are constructed of aluminum, while the CJ horns are molded of indestructible Fiberglass. Rugged diecastings and tough steel parts add strength. All are 100% weatherproof.

HU-12N Small in size, low in cost. Excellent for low power paging and talk-back systems where limited coverage is required.

HU-15N The most popular all-purpose, trouble-free speaker of its type and size.

HU-24N Similar to HU-15N. Larger horn improves low frequency response, increases over-all efficiency. For paging and talk-back systems that are also required to reproduce music.

CJ-14N Wide angle speaker with rectangular horn opening for broad sound dispersion in horizontal plane while maintaining good vertical coverage.

EC-10 Lowest priced American-made speaker designed specially for low power systems requiring limited coverage. Gives improved results and high efficiency for intercom and other applications formerly using cone speakers.

Horn sections molded of new tough, all-weather, acrylic plastic. Handsome beige-brown color combination blends with any decor. Tough steel bracket is adjustable and makes mounting simple and secure. Unmatched where size, weight, appearance and high efficiency combined with low cost are factors.

CJ-30N Similar to CJ-14N, except power handling capacity is increased. Larger, wide angle horn improves low frequency response.

TP-15N One high efficiency driver unit does the work of two for low cost bi-directional coverage in long corridors and outdoors. Universal bracket mounts dual horns at a 10° angle down or out from wall surface or pole.

TP-24N Same as TP-15N but equipped with oversized horns for improved low frequency response. Excellent for bi-directional paging locations required to reproduce music.

REVOLUTIONARY NEW ATLAS SOUND MOUNTING BRACKET! For quick, convenient, durable strapping of paging, public address and new column speakers to I-Beams and pillars. Incorporates "Versalock" features for 3-way horizontal and vertical adjustment plus new strapping feature. Easy to use. You just insert the banding through the bracket, around the pillar or I-beam and snip off with a cutting tool. Banding tool and materials available for easy mounting.

Transistorized POWER MEGAPHONES

New Electro-Voice Power Megaphones are extremely rugged, waterproof, weatherproof, and salt spray proof for the most severe uses: safety services, construction, sports, tour guides, marine, all emergency applications, etc.

All units include low-distortion, all-transistor amplifiers for high intelligibility and long term, trouble free operation. Two styles are available: pistol-grip trigger with built-in microphone for instant readiness in any situation; and separate microphone with coil-cord for semi-permanent installation or for resting heavier models. Pistol grip models are well balanced for ease of holding and have volume control easily reached by thumb. Most models have noise cancelling microphone which reduces unwanted background sound and feedback for higher operating volume. All models have convenient carrying strap.

16 and 20 watt models incorporate an alarm tone signal, push-button operated, useful for attracting attention, as a distress signal, or boat fog horn. These models carry a bright International Yellow — recognized emergency color. These larger units also feature plug-in recharging (when using nickel-cadmium batteries), with no disassembly, for semi-permanent life.

All E-V Power Megaphones are protected from defect by warranty. Parts will be repaired or replaced within one year, and there is no charge for labor within 90 days of purchase. (Transportation prepaid to E-V or warranty station.) Parts and service are always available quickly.

for Every
Application*

A OP SPECIALIST SERIES (OP4 - OP6 - OP8 - COP8)

These models represent the most advanced weatherproof paging and talkback speakers. They incorporate new design innovations with new materials to provide the highest efficiency with the lowest distortion factors of any competitive units available.

B OH-10 WEATHERPROOF DUAL SPEAKER SOUND SYSTEM

A high efficiency co-axial speaker that reproduces music and voice with the fidelity of an expensive indoor high-fidelity speaker system yet, the OH-10 is rugged and completely weatherproof. Components are housed in die-cast aluminum inclosure which is designed to compliment every setting from the shopping center to the patio. Bone White and Forest Green.

C SPEAKERS — COMMERCIAL SOUND

Oxford public address speakers are designed for higher output, with less power input. This maximum conversion efficiency in power and coverage permits a reduction in the number of speakers usually required in an installation. And, lower rated power amplifiers may be used with a substantial savings in cost.

D INTER-COM SPEAKERS

Oxford high efficiency Inter-com speakers are designed to give round, full and clear reproduction in the voice frequency range and at the same time suppress unwanted background noises. Even whispers will be reproduced with great clarity in areas with high background noise levels . . . shouts are reproduced without distortion.

E ALL WEATHER SPEAKERS

Oxford offers a complete line of All Weather speakers specifically designed for maximum operating performance regardless of weather conditions. They feature exclusive Oxford HYDRO-PRUF cones for full environmental protection. Special moisture protected voice coils prevent humidity damage. Extra heavy cadmium plating, inside and out, resists corrosion.

F CERAMIC SPEAKERS

Featuring shallow construction, these speakers are ideal for in-wall, stereo wing, picture frame, and other installations where space is at a premium. In addition to the standard models, Oxford also offers ceramic units with exclusive Oxford Hidden Magnet design. The magnet is mounted between the basket and the cone, permitting use of the dual cone for extended range while retaining the thin silhouette.

G EXACT REPLACEMENT AUTOMOTIVE RADIO SPEAKERS

A complete line of automotive kits is available, including exact replacement speakers, universal speakers, special units for custom automobiles, and speakers specifically designed for transistorized automobile radios. Also surface mount and recess mount stereo.

H REPLACEMENT SPEAKERS

Oxford manufactures the most complete line of standard replacement speakers available for original equipment, including, phonographs, tape recorders, radios and television sets. The speaker sizes range from 2" through 15", in dimensions to insure a perfect installation.

I HIGH FIDELITY SPEAKERS

The Oxford acoustic-perfect high fidelity line offers a full range of woofers, tweeters, extended range and co-axial speakers. They are all designed to reproduce the entire audio spectrum with true high fidelity so necessary for fine stereo reproduction. For the price conscious hi-fi equipment buyer, Oxford offers the most outstanding value.

J PROFESSIONAL MUSICAL INSTRUMENT SPEAKERS

As a "full line" loudspeaker manufacturer, Oxford also produces speakers for many "special purposes." The most popular of these is a series designed for use with electric musical instruments, such as guitars and electronic organs. It is only with a speaker designed for this particular application that the full quality of the instrument and performance can be appreciated.

RCA**MICROPHONES
AND ACCESSORIES****77DX****BK-1A****BK-5B****BK-6B****BK-12A****KU-3A****POLYDIRECTIONAL RIBBON — 77DX**

The quality microphone standard of the broadcast industry, the RCA 77DX, is available in two models: one with a low-gloss finish for TV, the other a satin chrome finish for AM and FM. The 77DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency-response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be utilized. The 30- to 20,000-Hz frequency response of the 77DX makes it suitable for every high-fidelity broadcasting and recording application. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30- or 150-ohm output impedance. This 77DX mounts on a standard 1/2-inch pipe thread, and comes with 30 feet of three-conductor shielded cable, less plug.

NONDIRECTIONAL DYNAMIC — BK-1A

Ideal for outdoor use or wherever constant handling is required, the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. It provides uniform response from 50 to 15,000 Hz. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional; the horizontal position is semidirectional. The output impedance is 250 ohms, but 30- and 150-ohm connections are included. The BK-1A may be mounted on any type stand having 1/2-inch pipe thread and is perfect for use with the MA-06 desk stand. Thirty feet of three-conductor cable is supplied, less connector.

BK-1A\$95.00*

UNIAXIAL RIBBON — BK-5B

The BK-5B is a high quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardioid pattern. Frequency response from 30 to 20,000 Hz permits using the BK-5B for all types of high fidelity voice and music pickups. The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. It is supplied with thirty feet of three-conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has 1/8-inch pipe thread.

LAVALIER — BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3-ounce unit is only 2 1/8 by 1 1/8 inches. Wide-range frequency response (60-15,000 Hz) permits using the microphone for all speech applications. The 250-ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections. The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of three-conductor shielded cable is supplied, less connector.

SUBMINIATURE LAVALIER — BK-12A

The RCA BK-12A is a high-quality subminiature microphone weighing just 20 grams and measuring only 3/4" x 1 1/2". It has a wide-frequency response of 60 to 18,000 Hz, which has been tailored for proper speech balance. A line impedance voice coil permits use with 30- to 250-ohm unloaded inputs. The BK-12A is essentially nondirectional to 6,000 Hz, and as a result, ordinary errors in orientation have negligible effect upon response. It is supplied with lanyard, tie-clip holder, cable clip and 30 feet of two-conductor cable (less connector).

UNISPHERE A Microphones

MODELS 585SA • 585SB • 585SAV • 585SBV

The Unisphere A Series of Microphones are economical unidirectional dynamic microphones featuring special filters that provide protection from wind and "pop" (explosive breath sounds). They also eliminate annoying loudspeaker "squeal" caused by feedback. These models are particularly suitable for use in locations where omnidirectional microphones may not operate properly because of poor acoustics or where wind creates a problem. The Model 585 Series comes complete with shock-mounted cartridge, On-Off switch, detachable cable, and a Model A25B swivel adapter.

The Model 585SAV and 585SBV are two of the most ingenious microphones ever designed because the volume control on the microphone case enables the user to change the loudness of the P.A. system at the microphone location. Ideal for applications where the amplifier controls are inaccessible or where the speaker or singer wants to control his own volume for dramatic effects.

MICROPHONE MIXERS

SHURE M68 SERIES MICROPHONE MIXERS (TRANSISTORIZED—PORTABLE)

PRACTICAL—The Shure M68 Mixer is a practical, efficient and economical way of increasing the efficiency, usefulness and flexibility of public-address and paging systems, or tape recorders, by making it possible to use more than one microphone or other sound source. You can strategically place microphones so that everybody who should be heard will have a microphone close at hand. It is particularly useful where additional microphones are needed for panels or for audience Question-and-Answer sessions.

UNIQUE—This new mixer is unique in that it satisfies the needs of most public-address systems and serious tape recording enthusiasts, while being light enough to be portable, simple to operate and modest in cost. It is the **only** mixer which strikes a happy medium between the expensive heavy and complex permanent-installation type mixer and the extremely low-cost units of limited usefulness.

With the M68, each microphone (or other sound source) can be cut in or out of the system (and independently balanced for volume) with no loss in microphone output level. In addition to independent volume controls, a master volume control simultaneously controls the gain of all inputs. The M68 can, therefore, be used as a conveniently "at-hand" P.A. system volume control in situations where the regular amplifier is located some distance away.

VERSATILE—You can use high or low impedance microphones, in any mix, with any type amplifier without need for expensive line transformers.

You can tape record from multiple sound sources or record sound-on-sound with two recorders.

Frequency response is 30-20,000 Hz (cps). Underwriters Laboratory listed for use in commercial applications. Easily portable... 25½" x 11½" x 5½", weighs only 4 lbs. 105-125 V. A.C. 50/60 cps.

Series "60" Cabinet Racks

Scientifically designed to meet all requirements for human needs as well as component physical specifications; the most practical cabinet rack developed for either a single piece of equipment or a large instrumentation system. Very economical to the user, units are shipped fully assembled and ready for immediate use.

Basic frame welded in a solid unit composed of 14-gauge cold-rolled steel channels. Sides have "U" braces with perforated channels for fastening vertical adjustable mounting rails. Rails also support other types of equipment such as brackets, shelves, slides, etc. Eliminates need of drilling holes in the rack. Sides and rear door made of 16 gauge steel. Door may be mounted to open left or right. Vertical channel, 6" wide, welded to door to prevent vibration or whip. Two pairs of panel mounting rails are supplied; fully adjustable. Panels may be mounted in front and rear at the same time. Front rails drilled and tapped 10-32 W.E. spacing. Rear rails are drilled according to universal spacing.

All Series Sixty enclosures may be quickly combined with each other to create units of any desired width as shown in the Add-A-Rack series. In addition, such accessories as desk tops, turrets, drawers, slides, sloping panel supports and front door are easily installed.

Standard finishes are smooth baked enamel over a primer. For two-tone gray, specify by adding suffix **SG**. For two-tone blue, add suffix **SB** to order number. Standard Bud relay rack panels are available for the Series Sixty racks in light gray and light blue; when ordering, add suffix **SG** for gray; **SB** for blue.

SHADOW CABINETS

An extremely versatile housing since both front and rear panels as well as the bottom may be removed for installation or servicing purposes. Unusually attractive appearance is created by recessing the front panel one inch as well as by beveling the front edges of the body.

The two piece body of the shadow cabinet is made of 18 gauge steel and the panels of 16 gauge steel. Finish is light gray hammertone.

Four rubber feet attached to the bottom of the cabinet eliminate marring of the surface on which it may be placed.

New PRECISION DIE CAST BOXES

For applications requiring a sturdier structure than a sheet metal utility cabinet, Bud now offers this line of die-cast aluminum boxes. The close fitting flanged lids are fastened to bosses in the body by means of screws. This feature together with the thickness of the aluminum alloy combine to provide excellent screening properties. The boxes, cast of LM-380 aluminum, are light in weight and easy to machine. These enclosures are suitable for a number of uses including instrument and meter cases, filter networks, junction boxes, switching, audio and radio frequency distributors plus many other purposes where a small box is called for. Especially desired for concealed or other interior use where safety closure is required.

Slides

All BUD slides and Linear Motion Mechanisms are built from four basic components: the outer member, inner member, ball retainer and a number of ball bearings. These parts which are all steel, have been designed to enable us to fabricate an extensive variety of models. All models excel in their precision smooth, featherlight telescoping movement and are unsurpassed for their reliability and absence of wear after many hundreds of thousands of cycles. Each main member is press formed to a constant and precise tolerance from high tensile cold rolled steel. Ball bearings of chrome carbon steel are set in special retainers which keep them evenly spaced to give an extremely smooth movement of the slide.

MATERIALS—Main members: high tensile cold rolled carbon steel. Ball retainers: cold rolled steel. Ball bearings: precision carbon steel. Mounting brackets, mounting plates, locks pivot wheels, etc.: mild steel.

FINISHES—Main members: Zinc and chromate. Ball retainers: Zinc. Ball bearings: Chromium plate. Mounting brackets, mounting plates, locks, pivot wheels, etc.: Zinc.

LUBRICANT—Special life-long lubricant specification DTD 825B (MIL. G. 23827) unless otherwise specified.

MOUNTING HOLES—All slide mounting holes are .180"x.210".

ASSEMBLY CARE—During assembly operations special care should be taken to prevent drill chippings and other foreign matter from entering the slide ball races. It is important that the slides are mounted parallel to each other and to chassis/drawer to achieve proper movement and fingertip ease of operation.

ADDITIONAL NOTES—Self-cleaning bridged ball retainer. Use only #8 pan or binding head screws for mounting. Long life, full ball bearing movement.

Imlok System

THE BASIC ELEMENTS OF THE **BUD IMLOK** SYSTEM

901 BUD IMLOK SYSTEM

The BUD IMLOK SYSTEM comprises a large variety of aluminum corner connectors which interlock with extrusions to make metal housings easily, quickly and economically. It is ideal for research, prototype and short run work. With the simplest of hand tools, precision cases, boxes, cabinets and consoles may be made. Simple or complex designs are achieved by the proper combination of the elements of the system. Examples are illustrated on the following page. Enclosures are completed by attaching steel or aluminum sheet to the framework by any convenient fastening method.

There are two different types of Imlok components and structures. The 901 Slimline components are more slender in appearance, and the corner connectors are completely covered by the extrusions in every completed structure. The Standard components are more rugged, and the ball surface of the connector is exposed. Ease of fabrication and assembly is common to both types.

Every Bud Imlok part is designed with an eye not only to its efficiency as an engineering component, but also to its appearance as a part of a completed housing. Special accessories such as hinges, catches, rubber feet and casters are available. Also a complete range

STANDARD BUD IMLOK SYSTEM

of precision-made handles. Imlok components are available from authorized Bud Distributors in every major marketing area. You may purchase BUD IMLOK in whichever stage of manufacture you prefer:

1. With connectors pre-drilled, ready for assembly with self-tapping screws and with extrusions.
2. With connectors pre-drilled, ready for assembly and with extrusions custom-cut by Bud to your lengths and mitered.
3. As a complete framework, ready for installation of your own panels.
4. As a complete housing with panels, but unpainted.
5. As a complete housing, fully finished.

If you have any queries relating to construction or design, please do not hesitate to contact our Imlok Advisory Service. Our extensive knowledge and experience is at your disposal—alternatively, we will always be pleased to arrange for one of our technical representatives to call on you to discuss any problems you may have.

Imlok System

BUD IMLOK IS EASY TO USE

Cut the extrusion to length.

Mitre the ends of the flanges. Special Imlok jigs make this easy.

Slide extrusion onto the connector.

Tighten the self-tapping screws until the point bites into the extrusion.

THE CHASSIS WITH THE CAP COVERS AS ORIGINATED BY LMB®

Built with the new original LMB® popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB® precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB® chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

MODULAR CABINET RACKS

CONSTRUCTION DETAILS OF ASSEMBLED FULLY WELDED RACKS

To create a clear understanding of typical PAR-METAL PRODUCTS rack construction, the cut-away illustration below of a Series PL/FL cabinet details the features. From this simplified drawing and the enlargement of critical support areas, the quality of construction is evident. These versatile racks are planned to accept many accessories that complement the widest uses of your electronic equipment.

EACH PAR-METAL MODULAR RACK FRAME is welded into a completely assembled unit. Doors, Top Panels, Panel Mounting Angles and ALL necessary trims and mouldings are included. When set in rows of any quantity, necessary joining trims are also included. Details and dimensions are on Par-Metal Pages 6 thru 12. Full check lists of optional accessories on Par-Metal Pages 9, 10 and 12. CONTEMPO-RACKS are heavily welded and ground smooth in all 8 corners for added support.

REMOVABLE TOP PANELS: Blank formed steel panels are standard. For louvered, fan opening or ventilating top panels, see Par-Metal Page 23.

DETACHABLE SIDE PANELS Are easily removed from the outside. (Not used on Models PX/FX).

FRONT MOULDINGS are designed to match the decor of each model. (Not used on Models PC/FC).

BOLT RETAINER RAILS: These tracks permit you to locate and lock both Panel Mounting Angles and Vertical Side Supports at your choice of forward or back position. Mounting bolts, hex nuts and lock washers are supplied.

A wide variety of Slides, Drawers and Extension Shelves are itemized on Par-Metal Page 17.

ELECTRICAL OUTLETS: A duplex outlet and utility box are installed under the rear door. Knockout holes for cable connections generously provided in all Professional Models.

RECESSED BASES OR ROLLER TRUCKS are available as optional accessories.

FLOOR LEVELERS: Four are supplied for each rack. Pre-drilled holes for floor levelers may also be used to bolt rack bottom to base or roller truck.

PANEL MOUNTING ANGLES are "L" Shaped structural steel, fully adjustable to your selection of front to back position. One pair is supplied with each rack. They are drilled to meet E.I.A.* and W.E.* hole spacing specifications. Full details are on Par-Metal Page 14.

SIDE MOUNTING BRACKETS: May be used separately or with shelves, as shown. Slots allow for vertical adjustment. Zinc plated.

VERTICAL SIDE SUPPORTS: For attaching Side Mounting Brackets, Equipment Shelves, Slides, Extension Tables, etc.

Made from #12 Gauge (.104") steel tapped 10-32 on standard EIA* and WE* hole spacing specifications. Mounting bolts, hex nuts and lock washers are provided. For details see Par-Metal Page 14.

DOORS: (Not illustrated) Cut from a single sheet of $\frac{1}{8}$ " cold rolled steel and "dutch formed" on all sides to provide smooth, double thick edges. Available solid or with various modifications. (See Par-Metal Page 23). Lock handles are furnished on racks with front and rear doors. Racks with rear doors only have non-lock handles but lock handles are available. CONTEMPO front doors are "Pan Shaped." ALL CONTEMPO-Rack doors have "D" shaped, Flush Mounted handles.

*Alternate hole spacing of $\frac{5}{8}$ "- $\frac{5}{8}$ "- $\frac{1}{2}$ " center to center.

A typical Dimensional Drawing of Construction Elements of a Par-Metal Modular Cabinet Rack Cat. No. PR-8427-B.

RACK FRAMES are #12 Gauge Steel (.104") are fully welded with modern, functional design.

A pair of **PANEL MOUNTING ANGLES** is included with each Rack. Hole spacing will meet both W.E. and E.I.A. Standards. Steel 3/8" diameter bolts travel these angles along pre-welded on tracks in the rack frames to provide selective front to rear positioning. Professional Rack Panel Angles are 1-1/2" x 1-1/2" x 3/16" and are tapped 12-24 (10-32 tap optional). CONTEMPO-RACK Angles are 1-1/2" x 1" x 7/64" and are 10-32 tap ONLY.

DOORS: Except for Contempo Front Door (Series FC, see #4 above), all doors are "Dutch Formed" (one piece out of #16 gauge steel (.059")). On Racks with front doors, a solid door is standard. Louvered Rear Door is standard on all racks. However other door modifications are optional at no charge (see Part-Metal Page 23). To save aisle space, racks 30" wide or more have double doors with three-point latches.

HINGES for ALL doors are of the slip-joint type for simple removal.

DOOR HANDLES are die cast, chrome plated and are non-locking. Locking Handles are optional at \$1.00 extra per door. Lock Handles are provided on both doors on Racks with "F" Prefixes at NO extra charge. CONTEMPO-RACKS have "D" shaped Flush Mounted Handles. Automobile handles are on ALL other racks.

RECESSED RACK BASES are listed on Par-Metal Pages 6-8 and 11. Do not use rack base with roller trucks.

REMOVABLE TOP PANELS are standard. For ventilating modifications see Par-Metal Page 23.

HARDWARE is provided as needed at no charge. This includes bolts, washers, nuts, panel mounting screws and a grounding duplex electric outlet (below rear door).

ROLLER TRUCKS

A Single Unit Contempo Roller Truck, Model No. CR-192-1.

A Double Professional Roller Truck, Model No. HD-426-2.

2 PL-6718-B Racks with 1 RX-219 Exterior Table and a double EB-502 Extended Base Roller Truck with 2 EBL-501 Floor Locks.

GENERAL DESCRIPTION

ROLLER TRUCKS are engineered to fit and complement all PAR-METAL cabinet racks. All professional Roller Trucks are designated for PL/FL, PR/FR, and PX/FX Racks listed on Par-Metal Pages 6 through 8. ER, FD and DL racks are listed on Par-Metal Pages 18 through 20. Roller Trucks for these racks are **Dish Shaped**.

The inside dimensions are slightly larger than cabinet sizes, as a safety factor, and to provide better weight distribution. These models have rounded front corners and chrome plated moulding.

HEAVY DUTY TRUCKS: Construction: $\frac{1}{8}$ " welded steel plus $\frac{1}{4}$ " steel reinforcing braces. Casters: 3" diameter, swivel type, ball bearing, Rockite Composition. Non-marking wheels. Load Capacity 225 lbs. per wheel. Single Units have four casters, Double Units have six casters and Triple Units have eight.

CONTEMPO-ROLLER TRUCKS (Models CR, CRB and CEB) are **Pan Shaped** — flat across the top with aprons which partially cover the casters. They are sized to match the rack they support. Mating holes allow rapid bolting to the rack. They are available for one, two, or three racks. Single rack trucks have four casters... double rack and triple rack trucks have six casters.

Unless specified, **ALL** Roller Trucks except CONTEMPO, are finished in blue-gray wrinkle enamel. For PC/FC Racks,

(Models CR, CRB and CEB) the **standard** finish is Charcoal Gray Vinyl. When included in the order, Roller Trucks are matched to the Rack. For full finishing color guide, turn to PAR-METAL Page 4.

BRAKE CASTERS: Toe-Touch Brake casters are optional; they replace the 2 Front corner casters of any Heavy Duty or Contempo Roller Truck. When Brake Casters are used as CRB Trucks, the 2" apron is reduced to $\frac{1}{2}$ " for easier access to the brake mechanism.

EXTENDED BASE ROLLER TRUCKS: Extended Base Roller Trucks offer extra depth in front and are strongly recommended when racks are equipped with slide, tables or drawers which may bear extra weight or pressure when extended. The added depth in front of the rack provides stability and safety. For easier movement of the racks 4" diameter wheel casters are supplied. Provision is made for adding Heavy Duty Floor Locks (optional). Construction: .104" welded steel — plus $\frac{1}{4}$ " steel reinforcing braces. Casters: 4" diameter, swivel type, ball bearing, hard Rockite non-marking wheel with grease fittings. Load Capacity 450 lbs. per wheel.

STANDARD TRUCKS Construction: $\frac{1}{8}$ " welded steel. Casters: 2" diameter, swivel-type, ball bearing, Rockite Composition wheels. Load capacity — 125 lbs. per wheel.

FULL EXTENSION: of the equipment from the rack is engineered in. Most of the adjustments may be made without removal.

RUGGED CONSTRUCTION: Parts welded or fastened with stainless steel rivets and machine screws...supporting parts made from 12 gauge (.104") Prime Steel.

MINIMAL DEFLECTION is produced when the listed load capacities are measured with the slides fully extended.

HANDLES: A Chrome Plated Pull Handle Model H-506 (listed on Par-Metal Page 38) with necessary hardware is standard equipment on all Slide Assemblies.

All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended.

CONSOLE ASSEMBLIES

SINGLE UNIT ASSEMBLY

CONTEMPO-PED: Stand-up Model #CPS-34 with Model #PT-19 Top Cabinet, End Panels and Accessories.

DOUBLE UNIT ASSEMBLY

WITH 2 CONTEMPO-PEDS, Model #CPD-24, 2 Top Cabinets Model #CF-19 and Exterior Table, Model #CCT-16 with End Panels and Accessories.

GENERAL DESCRIPTION

Console Assemblies house Electronic Equipment at desk level. This combination of equipment enclosures with control cabinets, all 19" panel widths, supplies enough variety to satisfy most needs, often eliminating custom construction.

PAR-METAL'S 6 different pedestals in 2 depths and in both desk and stand-up heights, along with 14 different Desk Panel Cabinets — **PLUS** the industry's **ONLY** line of both Pedestal and Top Cabinet Angular Wedges, offers the widest choice of electronic housing assemblies. PAR-METAL'S Consoles are made in 2 basic design categories. **Professional Pedestals** (Traditional Design — use prefix PD) are desk height, 24¼" and 34¼" deep. Four Desk Top Cabinets in Single, Double, Triple or Quad lengths, complete these assemblies.

CONTEMPO-PEDS (Modern Design — use prefixes CPD or CPS) add a new dimension to the 24¼" and 34¼" deep desk height models. PAR-METAL proudly offers the trade, its **exclusive** line of CONTEMPO-PEDS in Stand-up Height, with Table Tops 40" from the floor. Ten new CONTEMPO Top Cabinets with matching pedestal and top cabinet Angular Wedges (at both 30° and 45° angles) give the engineer unlimited scope in designing a satisfactory configuration. Top Cabinets as well as pedestals are made with removable end panels. This permits ready addition (or removal) of a section when future use dictates.

Standard finish on the **CONTEMPO** line is a combination of Dawn Gray and Charcoal Gray Vinyl. Any color or combination of finishes in enamels, lacquers, suedes or acrylics is available.

PEDESTAL FRAMES: The Pedestal Frame forms the base of all equipment to be mounted below desk table level. It is solidly welded for rigorous use. It mounts 19" wide panel equipment. A reinforced base and two pairs of Panel Mounting Angles are included. Angles are readily adjustable to any forward or back position. Each Frame has a fitted #12 gauge (.104") steel removable bottom plate, some with knockouts and access areas (see diagrams). Holes for mounting casters (optional) are pre-drilled in this plate.

CONTEMPO-RAMA OF DESK PANEL CABINETS

For 19" Wide Panels

10 NEW CONTEMPO MODELS • NEW FEATURES • NEW USES

The SAME FULLY WELDED Sturdy Construction

Desk Top Cabinet #PT-19 is shown without End Panels or Formed Panels. It is typical of ALL Models.

PAR-METAL's CONTEMPO Top Cabinets are made in single units with detachable End Panels, thus permitting the addition and/or removal of a unit at any time. Mating hardware is supplied. End Panels fit into brackets and lock in place with a ¼ turn cowl fastener, and are set-in ⅜" off the edges.

To meet the exacting demands of modern electronics, our engineers have designed many new models. Your choice of layout configuration is further extended by PAR-METAL's new and exclusive line of **ANGULAR WEDGES** for both CONTEMPO-PEDS and DESK TOP CABINETS. (Details are on PAR-METAL Page 32). They satisfy a long overdue need in the industry.

All models except LS-24 fit exactly and use no table tops on the 24¼" deep CONTEMPO-PEDS. For Model LS-24 and to use any model on a 34¾" deep pedestal, Formica Table Tops are listed on PAR-METAL Page 34. All CONTEMPO-PEDS may use exterior tables (see PAR-METAL Page 33). To decorate the CONTEMPO-LINE, we add a New Look! For the entire CONTEMPO-RAMA, standard finish is a combination of Dawn Gray and Charcoal Gray Textured Vinyl. Your choice of other available finishes are shown on PAR-METAL Page 24.

Construction: CONTEMPO Desk Top Cabinets are 21½" wide. A full complement of 19" wide blank formed panels are supplied. They are listed with each cabinet's description. A flat ⅛" steel or aluminum panel may be substituted for these formed panels without extra charge, if so ordered. A formed **Rear Drop Door** with full length continuous hinge (Model DRD) may be substituted for the rear panel at an extra cost of 5% of the top cabinet. Ventilating formed **Rear Drop Door** (Model VRD) may be substituted at an extra cost of 7½% of the top cabinet.

ELECTROLYTICS

TYPE AFH TWIST-PRONG
ELECTROLYTICS

Twist-prong mounting electrolytic capacitors constructed of high-purity aluminum foil throughout and designed for 85°C operation. All units feature improved moisture resistant seals and are manufactured especially for high ripple current circuits and selenium rectifier applications.

Primarily used for audio filter bypass applications in radio-TV and audio equipments, they are also finding many applications in industrial electronic equipment. They meet all requirements of EIA Specification RS-154.

Units for printed wiring applications (PWH) are indicated as such.

TOLERANCES 0-50 volts, -10% +250%; 51-350 volts, -10% +100%; 351 volts and higher, -10% +50%.

The AFH capacitors listed here include only those ratings which might find usage in industrial applications. A complete line of ratings may be found in the latest Aerovox Industrial Catalog, IDC 567, or Servicemen's Catalog, SE-567, and may be requested from Aerovox Corporation, Distributor Sales, or through your nearest authorized Aerovox Industrial Distributor.

ELECTROLYTICS — (Continued)

TYPE PRS "DANDEE" TUBULAR METAL-CASED ELECTROLYTICS

These electrolytic tubular capacitors are furnished in aluminum cans with insulating sleeves, and are designed for 85°C operation in TV, radio and industrial applications.

Single-section units are supplied with bare, tinned-copper leads 3" long. Negative is common and grounded to case, and all units feature a common cathode. Surge voltage specifications are per EIA RS-154. AC units are indicated as PRS-AC, non-polarized units are indicated as PRS-NP, and are for replacement use in cross-over networks and color TV.

Multiple-section units are furnished with mounting strap. If a mounting strap is desired on single-section units, specify when ordering. Sizes shown are actual can sizes; for size over cardboard sleeves, add 1/16" to the diameter and 1/4" to the length. As present stocks are depleted units will be supplied with PVC sleeves.

Units with capacities up to 1,000 Mfd at 0.50 VDCW will have tolerances of -10% +150%. Units of 1,001 Mfd and higher at 0.50 VDCW have tolerances of -20% +150%. Units of all capacities but with voltage ratings between 51 and 350 VDCW will have tolerances of -10% +100%, while those with voltage ratings from 351 VDCW and higher are rated -10% +50%.

TYPE CRE MINIATURE ALUMINUM CASED ELECTROLYTICS

Miniature, metal can units that are ideal for bypass, filter and coupling applications in low voltage, compact, miniaturized electronic assemblies such as transistor radios, hearing aids, tape recorders, etc.

All-welded construction and high purity ingredients throughout eliminates corrosion, variable or high resistance connections and units feature extremely low leakage characteristics.

Temperature range: -20°C to $+85^{\circ}\text{C}$ capacity tolerance: $-10\% \pm 100\%$ nominal lead length: $1\frac{1}{2}''$. Units are furnished with tinned copper leads and insulating sleeves of heat shrinkable Mylar tubing which adds only $1/32''$ to can diameter and $1/16''$ to length.

These units furnished in "Parent Case" sizes. Non shaded part numbers are the Parent Units for all lower voltages of the same capacitance. Units will be marked with voltage range and capacitance and any part number shown in the shaded area will no longer be available when present stocks are depleted, but will be replaced by the Parent Unit.

TYPE PTT AXIAL LEAD,
PLASTIC CASED ELECTROLYTICS

Small in size big in performance, designed especially for wide applications in transistorized circuitry and cramped electronic assemblies, here is a truly MINIATURE electrolytic tubular that will handle full size loads. Aerovox Type PTT units feature "Polycap" cases that are the next best thing to metal cans for maximum protection against humidity. Advanced construction techniques assure long capacitor life. Units are rated for operation at temperatures from -30° to $+65^{\circ}\text{C}$.

These units furnished in "Parent Case" sizes. Non shaded part numbers are the Parent Units for all lower voltages of the same capacitance. Units will be marked with voltage range and capacitance and any part number shown in the shaded area will no longer be available when present stocks are depleted, but will be replaced by the Parent Unit.

TYPE BCD UPRIGHT MOUNTING
BAKELITE CASED ELECTROLYTICS

Low-priced electrolytic tubulars for industrial applications in transistorized assemblies and tightly cramped electronic assemblies. Upright mounting BCD units perfect for replacement in printed wiring circuits. Plastic cases and epoxy end seals offer excellent protection against moisture and prevent drying out or leakage of electrolyte. High purity foil construction throughout for longer life and low leakage. Lead lengths of 1" minimum. Positive lead is identified by a "+" mark on case and lead is also smaller wire gage. Operating temperatures from -30°C to +65°C.

These units furnished in "Parent Case" sizes. Non shaded part numbers are the Parent Units for all lower voltages of the same capacitance. Units will be marked with voltage range and capacitance and any part number shown in the shaded area will no longer be available when present stocks are depleted, but will be replaced by the Parent Unit.

ELECTROLYTICS — (Continued)

TYPES HCB AND NPB HIGH CAPACITY-LOW VOLTAGE ELECTROLYTICS

HCB units are polarized for industrial applications such as battery eliminators, sound projectors, power supplies, etc. NPB units are non-polarized for welding and control equipment applications.

All units feature heavy duty bakelite cases eliminating the need for outer cardboard sleeves. Operating temperature range from -40°C to $+85^{\circ}\text{C}$. Capacity tolerance up to 150 VDCW is -10% $+100\%$; over 150 VDCW -10% $+50\%$. High capacity, etched plate construction provides long-life. Units are supplied with wrap-around, footed brackets for vertical mounting. Brackets for horizontal mounting available on special order. Complete technical information is contained in Bulletin NPJ-117.

CAPACITORS

**TYPE B161Y —
High Voltage Capacitor**

Now a dual purpose high voltage capacitor for use on standard DC applications or low frequency AC use. These units incorporate a dual dielectric of film and Kraft paper with a special impregnant which allows these units to be used as replacements for the higher priced glass tube capacitors. Standard tolerance is $\pm 20\%$. Operating temperature is -45°C to $+100^\circ\text{C}$. All units are furnished with #18 AWG wire leads. Also available on special order are units with studs for mounting in place of the glass capacitors.

Higher voltages and capacities available on request. For full technical information request bulletin NPJ-135

TYPE V161

AEROFILM® (MYLAR*) CAPACITORS

V161 Aerofilm Tubular Capacitors are high quality units in Polycap® cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C . Their excellent resistance to humidity and moisture are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is $\pm 20\%$ but also available in $\pm 5\%$ and $\pm 10\%$.

CAPACITORS

TYPE V146Z and V146ZR METALLIZED MYLAR FILM CAPACITORS

Flat 'Mylar Wrap and Fill' units (V146Z) and round case styles (V146ZR) offer light weight and ultra-miniature design along with high insulation resistance and long, stable life. These units are instrument quality and have the self-healing characteristic of all metallized dielectrics.

Standard tolerance is $\pm 10\%$, with closer tolerances available on special order. Power factor will not exceed 1% and leads are solder coated "Copper-Weld" wire.

This series is engineered for use in printed circuits and airborne equipment of all types. Flat style permits mounting in banks for space conservation.

For complete technical information, request Bulletin NPJ-132.

TYPE K146Z and K146ZR METALLIZED POLYCARBONATE CAPACITORS

Metallized polycarbonate film capacitors with many advantages over other film dielectric types. Units have high capacitance stability, low dissipation factor, low dielectric absorption and high insulation resistance. Metallized polycarbonate construction assures a self-healing unit should rare dielectric breakdown occur.

Operating temperature range is -65° to $\pm 125^{\circ}\text{C}$ at full rating.

Standard tolerance is $\pm 10\%$, with closer tolerances available on special request.

TYPE K323Z METALLIZED POLYCARBONATE CAPACITORS

Metallized polycarbonate film capacitors with many advantages over other film dielectric types. Units have high capacitance stability, low dissipation factor, low dielectric absorption and high insulation resistance. Metallized polycarbonate construction assures a self-healing unit should rare dielectric breakdown occur.

Operating temperature range is -65° to $+125^{\circ}\text{C}$ at full rating. Standard tolerance is $\pm 20\%$, with closer tolerance available on special request.

If plastic sleeve is desired add suffix "P" to type number and specify when ordering. Add 1/16" to the diameter and length.

For full technical information request Bulletin NPJ-136.

CAPACITORS

TYPES P323S AND P323SX

Tubular, metal-cased units with hermetically sealed construction and glass terminal end seals. Engineered to meet high temperature, minimum space requirements, Types P323S & P323SX are designed for long life at elevated temperatures. Impregnated with HYVOL "S", a special high temperature liquid impregnant. These units are capable of withstanding twice rated voltage between terminals or between terminal and case for a 2-minute period. Ambient temperature shall be +25°C, -10°C for this test. Power factor is less than 1% when measured or referred to a frequency of 1,000cps at 25°C. Type P323S and P323SX are rigidly processed to assure operation between -65°C and +100°C. Type P323S uses an inserted-tab construction to obtain minimum size, while type P323SX has extended-foil construction for applications at very-low AC voltages.

For equivalent types rated -65°C to +100°C in the same case size as shown, order as P123S, SX etc., and request prices. Styles available from stock include units bearing suffixes S-SX which are as listed; G types, with one end grounded which are 1/16" shorter; GP types, grounded, with plastic insulating sleeve and 1/16" larger diameter and P types, with both ends insulated and a plastic sleeve, which are 1/16" larger in both length and diameter.

Grounded units to be discontinued when present stocks are depleted.

CERAFIL® TYPE MC80V CERAMICS

Ultra-miniature type MC80V units are engineered for air and space-borne equipments where size and weight parameters are critical. They are also ideal for printed-circuit applications in hearing aids and other devices where space is at an absolute premium.

Units in this series are designed to attain extremely high capacities per unit volume in line with growing miniaturization in electronic circuitry.

When tested using Cerafil® ratings, capacitors will meet or exceed the requirements of MIL-C-11015C. Units are available in 100 VDC ratings with $\pm 10\%$ and $\pm 20\%$ tolerances as indicated. They have a power factor of 2.5% maximum and operate between -55 and $+85^\circ\text{C}$ at 100 volts and -55 and $+125^\circ\text{C}$ at 50 volts. Type MC80V units have tinned copper leads of #26 wire at 0.005 mfd and below and #22 wire above 0.0051 mfd.

MIL-C-11015C capacitance values will be supplied with MIL color code markings, whether ordered as CK units or MC80V's.

Durez Coated C80V units are available on special order and MOQ of C80V units is **MOQ 500**

CERALAM® MOLDED MINIATURE CERAMIC TUBULARS

Aerovox "second generation" tubular ceramic capacitors represent the industry's first significant advance in volumetric efficiency. This type of construction permits 60 to 70 times as much capacitance per unit of volume as compared to conventional style hollow-core tubulars.

A combination of our previous listing of MC89, 91 and 905, combined because of new factory nomenclature. These units will meet the environmental requirements of MIL-C-11015 and 39014. All units English marked with tin copper leads.

CAPACITORS

CEROL HIGH CAPACITY, HIGH RELIABILITY ROLLED CERAMICS

Cerol capacitors are supplied in the higher capacitance range of paper and film units, but are much smaller physically, and have superior electrical characteristics.

Designed for general applications in bypass-coupling, as well as filtering and blocking circuits, these units are also engineered for critical decoupling and pulse applications where low series resistance at

high frequencies along with small size is required. In addition, Cerol capacitors are ideal for computer applications where low series resistance is a must.

Operating temperature range at rated voltage is -55 to $+85^{\circ}\text{C}$. At rated 50% voltage this range becomes -55 to $+85^{\circ}\text{C}$. All units will meet or surpass the requirements of MIL-C-11015B.

Cerol capacitors are available in types CR89 and CR90, rated at 50 and 100 volts respectively, at 85°C and derated by 50% at 125°C . Units are stamped with rated voltage for type identification. For full technical information, request Bulletin NPJ-112 Rev.

Radial gold plated dumet leads are standard. Tinned copper leads also available on special order. All values -#22 gauge except CR89W104AM as 26 gauge leads.

TYPE HP POWER AND TRANSMITTING
CAPACITORS AVAILABLE

Aerovox type HP ceramic power and transmitting capacitors are available in a wide range of capacities and voltages and make excellent replacements for higher-priced transmitting micas.

Type HPA ceramics are supplied in capacities from 8 mmf to 500 mmf rated at DC and HF peak working voltages of 5,000 volts and high frequency only ratings of 4 or 5,000 volts. Test voltage is 7,500 for all units.

Type HPB capacitors are available in capacities between 5 mmf and 500 mmf with DC and HF peak rating of 3,500 volts. HF only rating varies from 1,000 to 3,500 volts.

Both TYPE HPA and HPB are supplied ± 5 , ± 10 and $\pm 5\%$ tolerance, and feature silver-plated terminals for effective connections. Insulation resistance exceeds 10,000 megohms for all units.

Capacitors may be operated to 105°C without derating and safely stored at temperatures between -80°C and +185°C. Dielectric employed retains its properties to frequencies above 1,000 Mc, and effective upper frequency limit depends, in most cases, on mounting scheme used.

HI-REL CERAMICS

Aerovox holds approval to Level R of MIL-C-39014 for established reliability ceramic capacitors. However, please note that we can only ship Hi-Rel units thru DESC Approved Distributors. Customers who wish to obtain these units should contact the factory for the name of their nearest DESC distributor.

Type BLF-ICC Heavy Duty Feed-Thru Capacitors

These heavy-duty feed-thru's are the same as listed in MIL-C-11015. Units through 100 pf rated at 1,000 VDCW, values above 100 pf rated at 500 VDCW.

Tolerance $\pm 10\%$, except on 1,000 pf and 1,500 pf where tolerance is $\pm 20\%$.

Type UV High Voltage "Cartwheels"

Universal type high voltage "cartwheels" are engineered for filter and by-pass applications in television power supplies. All units are thoroughly tested to assure long life under high voltage stresses.

Five different mounting styles are available with quickly replaceable terminals. Supplied in a value of 500 pf at 10, 20 and 30 kv ratings.

CAPACITORS

MIL TYPES CM15, CM20 AND CM30
RECEIVING MICAS

Compact mica-dielectric molded capacitors made in accordance with MIL-C-5B. Furnished tested and color coded to meet all requirements for "N" temperature rating and all vibration grades of this specification. All units silver-mica molded in red Bakelite.

Types CM15, 20 and 30 bear Aerovox Part No. 1459, 1469 and 1464 respectively. In addition, items bearing Aerovox Part No. 1469-HV and 1464-HV have been designed specifically for television, low-power transmission and power amplifier applications.

Standard tolerance of all units is $\pm 5\%$. Closer tolerances available on special order.

DIPPED SILVERED MICA CAPACITORS
TYPES ADM-10, ADM-15, ADM-19, ADM-20 AND ADM-30

Plastic coated, dipped mica units are in many ways superior to molded mica capacitors, yet are smaller than conventional units.

These types meet all applicable MIL-C-5B test standards for molded mica capacitors and offer the following features:

High operating temperatures, -55 to $+125^{\circ}\text{C}$. Long-life characteristics • Improved temperature coefficient range • Radial leads for automatic insertion and printed-wiring assemblies • Unsurpassed performance and stability. Smaller physical size.

These capacitors have an insulation resistance of not less than 2,000 megohms after being subjected to the Humidity Resistance Test outlined in MIL-C-5B. Minimum insulation resistance is 25,000 megohms at 125°C ; 1,000 megohms at 125°C .

Units are clearly marked with catalogue number which includes capacity and tolerance.

AEROVOX DECADE BOXES

RESISTANCE CAPACITANCE INDUCTANCE

FIGURE B

Aerovox now makes available to the electronic industry laboratory quality standards in capacitance, resistance and inductance decades. From one of the outstanding manufacturers of precision resistors, capacitors and inductors, Aerovox is making available decade boxes of the highest quality in the ranges most needed for electronic and electrical laboratories at a price far below that of equivalent quality standards. Aerovox decade boxes are available in 11 units; 4 resistance decades, 3 capacitance decades and 4 inductance decades. Ten of the decades are housed in seamless, drawn steel cases coated with gray enamel. They are capable of taking the beating of bench use without impairment of accuracy. The 11th decade box, a new resistance model ARD-41, is housed in a special high impact plastic case which will also withstand rugged handling.

This new decade box has a range of 0 to 1.1 megohms in 1 ohm steps, combining all the three other resistance decades into one compact box. Outline drawings of both sizes are shown. All panels are black with the marking engraved in white. For full technical information request bulletin NPJ-109 Rev. 2.

SCREEN ROOM FILTERS

Screen room filters comply with the most advance requirements for r-f tight enclosures. All have attenuation equal to or exceeding that of the screen room.

High attenuation and ease of mounting make these filters ideal for critical applications. They are hermetically sealed and feature shielded end terminals using knockouts for 3/4" and 1" conduit.

All cases have 1 1/4" countersunk hole to permit flush mounting on the screen room.

For full technical data, request Bulletin NPJ-127.

We make capacitors for guys who can't stand failures.

For coupling, decoupling, filtering, timing, switching or computer circuits, CORNING Capacitors provide ultra-stable electrical performance. This stability is inherent in their fused glass and aluminum foil capacitive elements. These inorganic materials and continuous process and quality monitoring are responsible for the well-known CORNING CYFR capacitor made for the Minuteman. Many of the basic advantages of the CYFR have found their way into standard CORNING Capacitors. The properties of these capacitors are entirely those of

the closely controlled dielectric, and can't be changed by assembly methods or subsequent treatment. At 1 Kc and 25°C, dissipation factor is less than 0.001; at any given temperature, TC will not deviate from the curve by more than 5 ppm on CYFR, CYFM and CYO units.

Corning manufactures highly stable fixed glass capacitors to meet your demanding circuit requirements. Their performance and economic advantages will add value to your equipment.

HOW TO PARALLEL TCZ AND TCN UNITS TO OBTAIN A DESIRED CAPACITY AND TEMPERATURE COEFFICIENT VALUE

By using the proper TCZ and TCN units in parallel, a great variety of intermediate capacities and temperature coefficients are obtainable. Follow this simple formula:

- Desired capacity is(pf).
- Desired temperature coefficient is.....
Example: enter 330 for N330.
- Multiply figure of line 1 by figure of line 2.
- Divide the answer obtained (line 3) by 750. This gives you the value in (pf), of the TCN capacitor required. (For practical purposes, choose a standard unit of the nearest capacitance.)
- Subtract your result obtained in line 4, in mmf. (using the standard capacitance value you have selected) from line 1. The result will be the required TCZ capacitor, in (pf). Select nearest TCZ value.
Typical example: 560pF, N470TC:
a. $560 \text{ (pF)} \times 470 \text{ (N470)} = 263,200$.
b. $263,200 \div 750 \text{ (N750)} = 351$ (Use TCN-360) 360pF, N750 as one unit.
c. Subtract 360pF from desired value of 560pF = 200pF (Use TCZ 200) 200pF, NPO as the other parallel unit.
d. Paralleling TCN-360 and TCZ-200 = 560pF, N470.

THE JAN-C-20 DESIGNATIONS

JAN CODING DESIGNATION

NOTE: If unusually close accuracy is required, instead of selection the NEAREST STANDARD capacities as suggested in lines 4 and 5, exact capacities can be built up by first paralleling units of the SAME TYPE (capacities are added) and then combining TCZ and TCN per formula.

Type DTN, DTZ

Because of the inherent stability of T.C. ceramic dielectric material and smaller size, Centralab DTN and DTZ find many applications in frequency determining and resonant circuits—BETTER THAN MICA FOR ALL APPLICATIONS.

CERAMIC TRIMMER CAPACITORS

Centralab Ceramic Trimmers are small in size, light in weight and are easily mounted. Equal stability over 180° rotation is maintained even under adverse environmental conditions.

To eliminate any air film on the contact surfaces, mating surfaces of rotor and stator are ground optically flat and lubricated with silicone oil.

CERAMIC TRANSMITTING CAPACITORS

Centralab's transmitting capacitors are designed primarily for transmitters, induction heaters, electronic welding equipment, x-ray, diathermy and other high voltage, high frequency circuits. These capacitors have

extremely low power factor and stable retrace characteristics. Long leakage paths and rugged mechanical construction are afforded by the "double cup" design. Current ratings are listed for each unit.

ELMENCO CAPACITORS

DIMENSIONAL DATA

Maximum Dimensions

Maximum dimensions of the various DM case sizes have been specified to anticipate variations in coat thickness and minor protrusions on the surface. Average dimensions of a given lot may be appreciably smaller than those listed.

Note that the leads are not centered in the thickness dimension. This can be seen on the end view dimensional drawing. Construction of Elmenco Dur-Mica capacitors provides for leads to project from one surface of the mica stack, causing them in turn to extend from one edge of the capacitor. Regardless of case size and overall thickness, leads will always be within $\frac{1}{16}$ to $\frac{1}{32}$ from one of the capacitor surfaces except for SCDM types.

Not all dimensions of every capacitance value are listed since size varies almost linearly with capacitance value. Dimensions of values between those specified below should be determined by interpolation.

	DM-5	DM-10	DM-15	DM-16	DM-19	DM-20	DM-30	DM-42
R. MAX.	$\frac{3}{4}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{1}{8}$	$\frac{3}{4}$	$\frac{3}{4}$	$\frac{1}{4}$	$\frac{1}{4}$
S $\pm \frac{1}{2}$	$\frac{1}{8}$	$\frac{3}{4}$	$\frac{1}{4}$	$\frac{1}{2}$	$\frac{1}{32}$	$\frac{3}{16}$	$\frac{3}{16}$	$\frac{1}{16}$
LEAD WIRE GAGE	#26	#26	#22	#22	#20	#20	#18	#18

Dipped mica leads may be tinned copper-clad steel, 30% minimum conductivity, or tinned brass except for DM-5 and DM-10 case sizes which are copper-clad steel only.

Crimped Leads

In addition to the straight lead design, DM capacitors (except DM-5) are also available with crimped leads for printed circuit application. The crimp provides a positive stop when capacitors are mounted. This prevents interference of resin coat on the leads with dip-solder operation, provides greater mounting uniformity, and elevates the components slightly above the surface of the board. Crimped leads are normally copper-clad steel. Lead wire gage for crimped lead units is the same as for straight lead capacitors for types DM-19 through DM-42. For type DM-10 #24 gage is used, types DM-15 and DM-16 use #20 gage. Crimped lead units are not regularly stocked but are available to special order at nominal extra charge.

ELMENCO CAPACITORS

DM5 MINIATURE DIPPED MICA

Capacitance Range 1pF-390pF

The new ELMENCO DM5 dipped silvered mica capacitor has been designed to keep pace with the ever-shrinking world of electronic circuitry.

DM5 capacitors are supplied in standard voltage rating of 300 VDCW, 100V and 50V ratings as indicated in the tabulation below. Electrical and environmental specifications are basically the same as for the other ELMENCO dipped mica capacitor styles. The capacitors are stamped with working voltage and with capacitance value in pf. followed by a letter signifying capacitance tolerance. For example 27K would be 27 pF. $\pm 10\%$, 150G would be 150 pF. $\pm 2\%$.

NOTES ON DIPPED MICA CAPACITORS

All capacitances marked * are 300VDCW.

All capacitances marked ** are 100 VDCW.

‡ Insert tolerance letter designation in part number.

All values available in ±½% tolerance. Prices upon request.

For capacitance values within the ranges specified for each case size but not listed, there is a \$1.00 set-up charge per item. For the base price, use the next higher standard listed capacitance value.

- MIL-C-5 crimped lead type. Use this nomenclature when ordering. For all crimped lead types a \$2.00 set-up charge per item applies to all values ordered in less than 500 pc. quantities.

MARKING NOTES

- DM5:** Marked with capacitance in pF, tolerance letter, working voltage, and EMs.
- DM10:** Values with no military equivalent are marked with capacitance in pF, tolerance letter and EMs. Values with military equivalent (CM04 Style) are marked as above on one side, but with working voltage added. The other side will show abbreviated Mil nomenclature. Example: CM4ED101JO
- DM15:** Values with no military equivalent are marked with capacitance in pF, tolerance in percent and EMs. Values with military equivalent (CM05 Style) are marked as above on one side, but with working voltage added. The other side will show complete Mil nomenclature. Values with no military equivalent are marked with capacitance in pF, tolerance in percent, and EMs. (The DM20 Series has no military equivalent.)
- DM19:**
- DM20:**
- DM30:** Values with military equivalent (CM06, CM07, CM08) are marked as above (working voltage added) and with full Mil nomenclature; all on one side of unit.
- DM42:**

SPACE SAVER DIPPED MICA

SCDM

UNIQUE, SINGLE DIP, SPACE SAVING
CAPACITORS
FOR ULTRA MINIATURE CIRCUITRY

In applications requiring the high performance characteristics of dipped mica capacitors where space is at a premium, the Type SCDM reduced coat ELMENCO capacitors may often be used to advantage. A single protective resin coat is applied instead of the full series of dips incorporated in the standard unit. The amount of coat material is thereby reduced to a minimum consistent with good design, and a significant reduction of all dimensions is achieved.

All electrical and environmental requirements of MIL-C-5 are retained with the exception of case insulation (3.5.3) and moisture resistance (3.14). A maximum voltage stress of 100VDC through the case insulation is recommended for SCDM units. Although some lots of this type capacitor will not meet stringent MIL moisture resistance specifications, all will meet the humidity requirements of Paragraph 2.3.6 of EIA Standard RS-153. Therefore, the SCDM capacitors will operate with satisfaction where they will not be exposed to extensive periods of high humidity. It is recommended that if these capacitors are destined for operation under extreme environmental conditions, they should be given additional moisture protection such as encapsulation or hermetic sealing of the assembly.

Representative dimensions of the SCDM style capacitors are given below. The dimensions of intermediate values may be closely approximated by interpolation.

Pricing for Types SCDM10, SCDM15 and SCDM19 will be found on Page 280.

ARCOLYTIC CAPACITORS

MINIATURE ALUMINUM
ELECTROLYTICS

TYPE ME

Type ME Miniature Aluminum-cased Electrolytics use the same high purity (99.99%) etched aluminum foil as the standard size Arcolytics. The design of the Type ME is particularly adapted to the latest transistorized circuitry which features low voltages and compactness of structure.

Type ME capacitors have an all-welded construction which provides increased ruggedness and resistance to environmental extremes. Corrosion and electrolyte leakage are eliminated. Electrically, they exhibit extremely low leakage current and maintain extended shelf life without deterioration. All units are insulated with a transparent plastic sleeve permanently bonded to the aluminum body.

SPECIFICATIONS:**CAPACITANCE AND TOLERANCE:**

Capacitance measurements are made at 120 cycles per second and 25°C. Capacitance tolerance is -10%, +100%.

OPERATING TEMPERATURE RANGE: -30 to 85°C.

D.C. LEAKAGE CURRENT: Maximum leakage current is 5 microamperes or .03VC, whichever is greater, where V is D.C. voltage applied and C is capacitance in microfarads.

LEADS: Axial 1½" length minimum, #20 tinned copper.

NOMENCLATURE: The part numbers for each Type ME incorporate case size, voltage, and capacitance value:

The example specifies a 100 mfd. 12V capacitor, case size ¾" x ¾".

VOLTAGE RATINGS: The following table indicates letter designations assigned to the various voltages in which Type ME capacitors are supplied:

Letter Designation	A	B	D	E	G	J	M	N	R	T
VDCW	3	6	12	15	25	50	100	150	250	350

CASE SIZE: Type ME capacitors are made in 8 different case sizes.

CASE SIZE	DIMENSION	CASE SIZE	DIMENSION
1	¼" D x ¾" L	5	¾" D x ¾" L
2	¼" D x ¾" L	6	¾" D x 1" L
3	¾" D x ¾" L	7	¾" D x 1½" L
4	¾" D x ¾" L	8	¾" D x 1½" L

The insulating plastic sleeve adds ½" x ¼" to case dimensions.

STANDARD PACKAGING is in units of 5 in a custom-designed box which protects straight leads and shows quantity through a clear plastic window.

ELMENCO CAPACITORS

DIPPED TUBULARS

MYLAR* and MYLAR-PAPER

* Reg. DuPont Trademark

ELMENCO dipped mylar* and mylar-paper capacitors represent a double break-through in capacitor design. They combine missile and computer quality with commercial radio-TV cost. A recent development is the addition of precision dipped tubular capacitors in tolerances as low as $\pm 1\%$ in addition to the popular $\pm 10\%$ general purpose unit. The only difference between the general purpose "dp" series and the industrial precision capacitors lies in the extra stabilizing processes applied to close tolerance capacitors to insure retention of accuracy in the field under operating extremes. (See Elmenco-Arcolytic Industrial Catalog)

Elmenco Type DP capacitors are non-inductively wound and vacuum dipped to obtain solid impregnation and a rugged, moisture-proof coat. New fabricating techniques realize the full potential of the dielectric materials utilizing most of the low-cost procedures of the exclusive Elmenco dip-coat process. The result is a product of electrical excellence with high reliability in operation at 125°C . without derating. The specifications listed on this and following pages well-illustrate the inherent quality of these capacitors.

NOTE: The 100VDCW rated dp units are pure mylar* dielectric capacitors.

ELMENCO CAPACITORS

VARIABLE COMPRESSION MICA

TRIMMERS

Elmenco trimming capacitors are treated for resistance to humidity and for permanence of capacity setting.

The base is made of the lowest dielectric loss ceramic material available and the mica is clear India Ruby.

The soldering lugs may be bent in any position without affecting capacity setting due to the rigid construction of adjusting plates.

Trimmers shown here are standard sizes and capacities.

TYPE PC — PRINTED CIRCUIT TRIMMERS

The Elmenco trimmer capacitors, Types 40, 42, and 46, have been adapted for printed circuit techniques through alteration of terminals and mounting configuration. The holes in the terminal lugs are removed since necessity for hook-up is eliminated. The resulting solid terminals have greatly increased spring action, allowing the trimmer to be "snapped in" the printed circuit board and firmly held until soldered. The mounting lug portion of the trimmer has also been modified to facilitate positioning and support of the unit. Drawings of the trimmers and mounting layout are available upon request at no charge.

This printed circuit style is identified by the prefix letters "PC" preceding the regular part number. All listed values are available in the PC style.

For list price add \$0.05, for net price add \$0.03, to the respective prices of the standard trimmer.

88 STANDARD TYPES OF VARIABLE AIR CAPACITORS

APC capacitors are available in three basic groups. The original APC group is furnished with a hex collar on a slotted shaft as indicated in the drawing. The APC-"B" group is furnished with 1/4" diameter shafts to permit adjustment of

the capacitance with a front panel knob. The APC-"C" group is supplied with slotted shafts for variation of the capacitance and a 3/16" hex locknut to prevent movement of the rotor in equipment subjected to high levels of vibration or shock.

Film and Paper Dielectric Capacitors

Nytronics' broad experience in film and paper dielectrics is represented in a line of standard units for the aerospace, computer, instrumentation and consumer markets. The extensive Nytronics facilities are also available for production of custom components for use in these markets. A wide range of configurations and types is available to meet the most stringent requirements.

PSF SERIES — POLYSTYRENE AND FOIL Hermetically sealed in metal cases, these units are designed for applications requiring high insulation resistance, low dissipation factor, and minimal dielectric absorption. They are applicable for designs requiring high capacitor stability. Available in standard tolerance of $\pm 1\%$ to $\pm 20\%$. They can be provided to special close tolerance requirements of $\pm 0.1\%$, as well as matching sets for application in digital computers, precision timing circuits, and laboratory standards.

RPM SERIES — METALIZED POLYCARBONATE Available in tubular cases with glass-to-metal — seal terminals, the RPM Series provides high insulation resistance, exceptional stability and a minimal change in capacitance with temperature. Its self-healing properties, in the remote event of a dielectric breakdown, provide an extremely reliable unit. It also offers a low dissipation factor for AC applications.

MAF SERIES — MYLAR AND FOIL Designed for applications requiring a flat capacitance change with temperature from $+15$ to $+65^\circ\text{C}$, the MAF series provides exceptional electrical properties in the temperature range of -55°C to $+125^\circ\text{C}$. The dissipation factor at room temperature is less than 0.6% . The extended foil design provides for positive electrical contact between leads and electrodes irrespective of the operating voltage.

MAM SERIES — METALIZED MYLAR The MAM series offers a reduction in size over the MAF series. Its self-healing property, in the remote event of a dielectric breakdown, makes this hermetic unit suitable for the most stringent applications. Special capacitance tolerance of $\pm 1\%$ can be provided on a special order basis.

AFS SERIES — KRAFT AND FOIL Hermetically sealed with compression type glass-to-metal solder-seal terminals the AFS series is approved to MIL-C-25. Designed for operation from -55°C to $+125^\circ\text{C}$ this series is intended for use in military and industrial electronics.

Various packaging configurations are available for the series shown above:

- wrap and fill
- plastic
- standard glass seals and other custom hermetic enclosures

Other dielectric series are available such as Teflon, Metalized Paper, Combination Films and/or Film Kraft.

METALLIZED MYLAR* CAPACITORS

METALLIZED MYLAR*

CHARACTERISTICS

Metallized MYLAR* satisfies the requirements of high resistance, low absorption, excellent re-temperature and capacitance stability over a wide temperature range and high ambient operating conditions. The self-healing characteristics are well known and extend the useful life of the capacitor. The second, and most overlooked feature, is the possibility of making full use of the highest volts-per-mil rating of the film by eliminating all the weak dielectric areas. This results in extreme small size without sacrificing life, reliability and economy. Temperature range is minus 90°C to 125°C without voltage deviation. All units are extended foil construction.

TYPE AB

BATHTUB STYLE

Type AB CAPACITORS are hermetically sealed in bathtub containers and designed to operate under the most severe military environment and electrical conditions.

TYPE AZ EPOXY COATED

Type AZ CAPACITORS are an economical version of the Type AM. These capacitors are not designed to withstand an extremely rugged environment, but they are suitable for most commercial applications.

Style W is tubular with axial leads.

Style X is tubular with radial leads.

Style Y is rectangular with axial leads.

Style Z is rectangular with radial leads.

HOW TO ORDER

Select the style required. Find style, voltage and capacitance in the table. Establish the part number by selecting the heading (i.e. AZ2-etc.) and adding the capacitance code and style letter. Make certain that capacitance tolerance is indicated as a separate item.

AZ2 is rated at 200 volts and AZ3 is rated at 300 volts operating.

HIGH VOLTAGE FILTER CAPACITORS

SMALLEST SIZE AVAILABLE ANYWHERE

all glass containers with 'D' dimensions of 9/32 have 2-1/2 inch long 18 tinned copper pigtail leads.

CONTAINER is a hard glass pillar with ver fused to each end. A metal ferrule is ldered to each end assuring hermetic ailing. The stud is silver soldered to the rule. All parts are tin plated.

TYPE OF and TYPE LK capacitors are hermetically sealed, rated for operation at 85°C at full nameplate rating, and will withstand most environmental and electrical specifications in general use. Size is very small due to the nature of the dielectric used, and the particular attention to processing.

ELECTRONIC COMPONENTS

Type CE70 and CE71 MILITARY GRADE CAPACITORS

The Sangamo Types CE70 and CE71 are aluminum electrolytic capacitors designed and manufactured in accordance with Mil-C-62D. They are recommended for operation up to +85°C and are available in voltage ratings from 5 to 450 d-c volts. The Type CE71 is supplied with a plastic insulating sleeve. Commercial equivalents can be supplied which meet or exceed the applicable military requirements. **FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2236.**

Type DCM Computer Grade

FILTER AND ENERGY STORAGE ELECTROLYTIC CAPACITOR

The SANGAMO Type DCM is a high quality, long life, electrolytic capacitor, specially designed for use as an energy storage or filter capacitor at 65°C. The Type DCM is enclosed in an aluminum can and is normally furnished with a clear plastic insulating sleeve. Aluminum terminals, which are permanently molded into the top, include #10-32 machine screws. A pressure-sensitive vent is provided as a safety mechanism in each top. A footed, wrap-around mounting bracket is available at extra cost. **FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2231.**

Type 500 Computer Electrolytic

FOR HIGH RIPPLE AND HIGH TEMPERATURE APPLICATIONS

The Sangamo Type 500 capacitor represents the optimum design in electrolytic capacitors for storage and filter requirements in high reliability circuits requiring 85°C operation. An exceptional anode surface gain and better production control have been achieved in perfecting the Type 500. These advanced techniques, plus the use of the best electrolytes, result in capacitors having lower ESR which may be operated at higher ripple currents and in case sizes smaller than conventional capacitors. All units are supplied with screw terminals. Mounting brackets are furnished at extra cost.

SANGAMO ELECTRIC COMPANY

capacitors

ELECTRONIC COMPONENTS

Type EDC and LDC Energy Discharge Capacitors

TYPE EDC & LDC CAPACITORS are used for generating the large magnetic fields required in Plasma Physics, Laser Experiments, Metal Forming and Hypervelocity Wind Tunnels. Type EDC Capacitors are designed to meet the rigid requirements of applications where ringing discharge currents are intense and voltage reversals are up to 90%. Type LDC Capacitors are especially designed for Laser Research. Units are also in photoflash and spot welding applications where the discharge is over-damped or the load is essentially resistive.

Type 556 Computer Grade

ALUMINUM ELECTROLYTIC AXIAL LEAD CAPACITOR (105°C)

The Sangamo type 556 is a computer grade axial lead aluminum electrolytic capacitor with an operating temperature range of -40°C to 105°C . Voltage ratings from 3 to 150 VDC and capacitance values from 5 to 2,000 Mfd. are available in 12 case sizes. Mylar sleeves are provided for improved electrical insulation and mechanical properties. **FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2239A.**

capacitors

MIL Type CP72 PAPER

Spade Brackets

Footed
Brackets

Type CP72 capacitors are furnished in drawn metal cases and are designed to comply with the requirements of specification MIL-C-25. They are impregnated with various dielectric oils to guarantee the desired electrical characteristics available. Capacitors rated at 3000 volts or less are normally supplied with solder lug (B) terminals capable of accommodating a #14AWG wire. Type D and E terminals may be substituted if desired. If brackets are required, specify a choice of spade, lug or footed type.

For more complete information write for Bulletin 2423.

Type HVC HIGH VOLTAGE PAPER CAPACITORS

Sangamo Type HVC High Voltage capacitors are impregnated with a halogenated hydrocarbon called Diaclor B. This oil provides the desirable electrical performance characteristics for the most severe applications. They are sealed in shock and vibration resistant drawn rectangular or cold-rolled steel cases. The absence of solder seams eliminates oil leakage and contamination from solder flux. A wide variety of capacitance ranges are available in voltage ratings up to 50,000 volts d-c. Spade, footed or wrap-around brackets are optional at extra cost, but will not be furnished unless requested. When choice of brackets is not indicated, spade type will be supplied.

For more complete information write for Bulletin 2425.

Type S Subminiature Hermetically Sealed Metal Tubular Capacitors

Sangamo Type S capacitors are designed to meet the demands for a high quality, hermetically sealed paper tubular capacitor. They are encapsulated in brass tubular cases finished with a high tin content alloy. Hermetic sealing is accomplished by using glass-to-metal solder seal terminals. The impregnant used in these units is, Ethern, an oil of high thermal stability and superior electrical characteristics over the temperature range of -55°C to +125°C. Sangamo Type S capacitors meet the case sizes and performance requirements of military specification MIL-C-25. The limited number of popular listings below are furnished with insulated sections. They are also available with grounded case if equipment requirements so dictate. The adjacent cross reference table will assist in the interpretation of Sangamo catalog nomenclatures with the various military types and case constructions.

Types F1-F2-F3 MICA CAPACITORS

Types F1, F2 and F3 are the smallest of the Sangamo line of transmitting capacitors. They are encapsulated in low loss molded phenolic cases and possess a wide range of voltage and current ratings. The mica and foil sections are pressure clamped, vacuum impregnated and encapsulated in the case in such a manner as to provide stable characteristics and adequate resistance to moisture. All type F1 and F2 capacitors meet or exceed the applicable requirements of the MIL-C-5 specification.

TYPE F3

Type F1-F2

Types G1-G2-G3-G4-G5 MICA

Type G Ceramic cased capacitors are intended for service where high voltage and R.F. current ratings are required, such as in commercial transmitting or induction heating applications. All possible steps are taken in design and manufacturing operations to insure permanence of quality. Terminal plates are designed to permit any usual connecting or mounting practices. Case sizes are in accordance with Mil-C-5C specification covering type CM75, 80, 85, 90 and 95. **For more complete information write for Bulletin 2322.**

TYPE 291

TYPE 272

Sangamo transmitting cast mica capacitors are supplied in seven basic case sizes. They are encapsulated in a high quality thermo-setting compound which eliminates moisture intrusion and makes them highly shock resistant. These capacitors are designed for frequencies ranging from 100 kilocycles per second to 3 megacycles per second and are ideally suited for high current and high voltage circuits.

In capacitance and current ratings, Sangamo cast mica units are equivalent to MIL-C-5 Types CM65 through CM90 in molded and ceramic cases, but in environmental capability, operating temperature range, physical size, mounting configuration and reliability, they are far superior. **FOR MORE COMPLETE INFORMATION WRITE FOR BULLETIN 2324.**

TANSITOR TANTALUM CAPACITORS

TYPE: TES -55°C to +85°C

Tansitor Type TES tantalum capacitors are unique small foil tantalum capacitors ideally suited for use in printed circuits. They are similar in performance to CL30 and CL22 Type capacitors, but offer significant savings in space because both leads emerge from one end of the capacitors. They operate reliably over the temperature range of -55°C to +85°C.

As the name implies, Tansitor Type CM or custom-made capacitor "packages" are designed to fill special or unusual tantalum capacitor needs, most frequently in the area of extra high capacitance.

In most cases, Type CM units have employed tantalum foil internally. By its nature, however, a CM unit may employ internal sections of solid or wet sintered anode tantalum capacitors where their respective characteristics are desired. Combinations of foil, solid and wet styles are also available, if needed.

A wide range of ratings are available, with capacitance values as high as 310,000 microfarads. The CM series, however is adaptable for many ratings beyond those suggested, even to 1 farad and above, if required.

Dual or plural ratings are available in a single case or other components can be potted in the same case with the capacitors. For specific applications contact Tansitor Electronics, Inc.

TYPES: CL66-CL67 -55°C to $+85^{\circ}\text{C}$, and to $+125^{\circ}\text{C}$ Derated

Tansitor's Type CL66, 67, are wet sintered anode capacitors, employing glass-to-metal end seals, this series utilizes the same electrolyte systems as the CL64, 65 style with its well-known volumetric efficiency, but adds the reliability of a hermetically sealed unit.

TANSITOR**ELECTRONICS, INC.****MIL-C-3965D TANSITOR TANTALUM CAPACITORS** TYPES: CL64 & CL65 -55°C to $+85^{\circ}\text{C}$ and -55°C to $+125^{\circ}\text{C}$ Derated

Tansitor wet sintered anode capacitors listed herein are manufactured to meet all the requirements of MIL-C-3965 for MIL Types CL65 and CL65. Encased in a fine silver can, the sintered porous tantalum anode provides exceptionally high capacitance per unit volume. These units exhibit extremely low leakage currents, low power factor, and little change in capacitance with frequency.

As opposed to "Shoulder Type" construction of other wet types, the CL64 and CL65 offer a straight cylindrical shape, readily lending them to flat circuit applications.

TANSITOR TYPE UW ULTRA HIGH CAP SERIES WET SINTERED ANODE TANTALUM CAPACITORS -55°C to 85°C

Where high volumetric efficiency is desired and space is critical, Tansitor's extended range sintered anode capacitor fill the requirements. This is accomplished by the use of a special sintered tantalum anode which greatly increases capacitance for a given volume. In some cases the capacitance is increased by nearly three times.

TANSITOR SUBMINIATURE SOLID TANTALUM CHIP POLAR AND NON-POLAR TYPE TC AND UTC

Tansitor's Type TC solid tantalum capacitor is tailored to meet the demand for rectangular shaped, or "chip" components as often used in modular type assemblies. The small size facilitates high density packaging. TC styles find applications in many commercial and military electronic equipments, in by-pass, regulator, coupling, timing and hybrid circuits.

Tansitor's Type UTC capacitor is an unencapsulated version of the TC. The UTC is used primarily where space is limited and the final module is to be encapsulated. This capacitor has the same electrical characteristics and rating as the encapsulated TC. When ordering, add the letter "U" as prefix to TC part numbers shown below.

Type UTC is also available in Non-Polar style. Ratings on request.

TANSITOR**ELECTRONICS, INC.****TANSITOR TYPE S POLAR AND NON-POLAR SOLID TANTALUM CAPACITORS**

Tansitor Type S Polar and Non-Polar Solid Tantalum Capacitors are designed for continuous dependable use over their full operating range of -80°C to $+125^{\circ}\text{C}$. The units are similar to MIL Styles CS12 and CS13.

These advantages for the design engineer are further enhanced by the excellent showing made by S type units under conditions of high frequency application and when subjected to extensive vibration and shock, including all the stringent environmental requirements of MIL-C-26655, Styles CS12 and CS13.

TANSITOR**ELECTRONICS, INC.****TANSITOR TYPE ES POLAR****SOLID TANTALUM CAPACITORS WITH EPOXY END SEAL CAPACITORS**

Recommended for printed circuit assembly and other special application. Epoxy acts as a heat sink; consequently, parts are less apt to be damaged from excessive heat.

Capacitors are available in the same values as those listed under Type S on previous page — except start at .33 mfd. To order, add letter "E" as prefix to "S" part numbers.

Same physical dimensions as Tansitor Type S. Epoxy end seal is minimum of .01" thick. Insulated or uninsulated. Non-polar units available on request.

**TANSITOR TYPE XS POLAR****SPECIAL SOLID TANTALUM CAPACITORS**

Tansitor Type XS tantalum capacitors are unique in that they offer increased capacitance per case size.

Where size is a critical factor the XS type offers significant savings in space in that it employs one case size smaller than CS13 style and Tansitor's standard type for comparable ratings.

The XS type meets parameters of Tansitor's Type S.

Standard XS capacitors have glass to metal hermetic end seals.

Non-Polar units are available upon request.

TANSITOR TYPE EXS**SPECIAL SOLID TANTALUM CAPACITORS**

Tansitor Type EXS capacitors are a combination of the ES and XS type. The Type EXS offers the saving in space employed by the use of the XS type and the ES which employ an epoxy end seal to eliminate the length of the glass seal extension.

Non-Polar units are also available on request.

To order, change XS prefix to "EXS". Same ratings apply.

SPRAGUE CAPACITORS

VITAMIN Q[®] SUBMINIATURE PAPER CAPACITORS

These capacitors are the most widely used of all paper capacitors in commercial and military electronic equipment. Her-

metically sealed in metal cases, they are electrically and mechanically designed to meet stringent operating requirements. Impregnated with Vitamin Q, a substantially linear, controlled molecular weight, hydrocarbon polymer, which is exclusive with Sprague, these dependable capacitors are available for operation in two temperature ranges: -55°C to $+85^{\circ}\text{C}$ and -55°C to $+125^{\circ}\text{C}$. Because of their Vitamin Q impregnation, these subminiature capacitors have

a higher insulation resistance and longer life than comparable units with ordinary oils.

Sprague Subminiature paper capacitors exceed the performance requirements of military specification MIL-C-25A. A limited number of the ratings shown here are listed in the military specification and should be ordered by their MIL type designation where equipment specifications so require. (See page after next.)

Listed below are the most popular insulated section (ungrounded case) capacitors. For technical data on these and other types, ratings, and tolerances, as well as on wax-impregnated units for absolute minimum size, refer to the latest issue of Engineering Bulletin 2110.

Call your Sprague Industrial Distributor for Current Quantity Prices.

CHOICE OF INSERTED TAB OR EXTENDED FOIL CONSTRUCTION

In the past, inserted tab capacitors have not been recommended for low-voltage applications (e.g., below 10 volts). Recent improvements in design now make it possible to recommend them for operation at all voltages from 1 to rated, in nearly all applications.

From the application standpoint, the principal difference between the two construction types is that, at resonance, losses

are likely to be lower in the extended foil type. This is because the resistive component of impedance is likely to be higher at resonance in the inserted tab type of construction. Unless unusual circuit requirements make the losses at resonance a critical factor, the inserted tab construction is recommended, primarily because of the smaller size of the capacitor roll.

FILTEROL® FILTERS

FILTEROL 1 FILTEROL 2 FILTEROL 3 FILTEROL 4

Filterol Types 1, 2, and 3 — Designed for connection in series with power supply lines to interference-producing devices... A 3-terminal network with the case as one terminal... The selected filter should have a rating higher than the continuous operating current of the offending device... A single Filterol connected to the high side of the line is usually sufficient... In several cases a Filterol in each leg of the power line may be necessary... For three or four-wire systems, a Filterol in each wire is necessary.

Filterol Type 4 — A new, exclusive Sprague development incorporating Sprague HYPASS® Capacitor... Provides exceptionally high attenuation at frequencies above 5 megacycles... Intended for small devices with continuous current ratings up to 20 amperes.

CLEANING SOLVENT

"CAEON SOLVENT #27"

(Trichlorotrifluoroethane)

A cleaning agent for removal of oil, grease, and dirt from objects without harm to metal, plastic, or elastomeric parts.

• NON-FLAMMABLE • VIRTUALLY NON-TOXIC • CHEMICALLY AND PHYSICALLY PURE • CHEMICALLY AND THERMALLY INERT • STABLE

The solvent exhibits a washing and penetrating action which aids its cleaning ability. High density and low surface tension enables Caeson #27 to wet the surface of most materials and wash away dirt and sludge.

The solvent is useful in ultrasonic and vapor degreasing equipment. Soils which are normally insoluble in any solvent can often be removed by this solvent with cavitation in ultrasonic units. Vapor rinsing is more easily accomplished without exposing object to high temperatures.

The solvent is compatible with most organic systems. It will remove soils or contaminants and leave the surface "Residue-Free". All standard methods of using a solvent may be employed.

ETCHED CIRCUIT KITS

The production of professional-quality etched circuit boards — using the latest tested and proved techniques and processes — is possible with the KEPRO Kits now available. No prior experience in the art is necessary nor will you need elaborate darkroom or production facilities. Your office desk becomes your prototype "factory".

The comprehensive KEPRO instructions, supplied with each kit, take all mystery out of etched circuit production and you can progress quickly from your first experimental "breadboard" to the run production quantities of functional etched circuit boards. KEPRO kits are the most complete to be found. With most kits, you will need to supply, additionally, only water, electricity, and time.

STANDARD MANUAL RESIST ETCHED CIRCUIT KITS

Produce basic etched circuit patterns quickly and accurately. Ink and pressure-sensitive tape resists are applied directly to copper clad boards before etching. Kits include three 3" x 6" boards, cladding one side with one ounce foil, an ink resist fiber pen, assortment of pressure sensitive conductor strip and termination circle tape, etching solution, tray and instructions. One of the boards is perforated with .040" diameter holes on 2/10th grid for simplified component mounting.

CAT. NO. S-101A — Standard Manual Resist Kit with XXXP Paper Base Phenolic Boards. Wt., 1 lb., 13 oz.

Suggested Net Price, \$3.95

CAT. NO. S-101A-G — Standard Manual Resist Kit with G-10 Glass Epoxy Boards. Wt., 1 lb., 15 oz.

Suggested Net Price, \$5.95

PROFESSIONAL PHOTO RESIST ETCHED CIRCUIT KITS

No darkroom needed to produce professional-quality photo-etched circuit boards with these KEPRO kits. One 3" x 6" and two 3" x 6" photosensitized boards, each clad one side with 1 ounce copper foil, can be handled in subdued room light. Kits include "cut and peel" mechanical negatives, exposure frame, developing solution and tray, etching solution and tray plus instructions that educate. You can produce any number of identical circuit board patterns using the photo resist method.

CAT. NO. P-101A — Professional Photo Resist Etched Circuit Kit with XXXP Paper Base Phenolic Boards. Wt., 2 lbs., 13 oz.

Suggested Net Price, \$5.95

CAT. NO. P-101A-G — Professional Photo Resist Etched Circuit Kit with G-10 Glass Epoxy Boards. Wt., 2 lbs., 15 oz.

Suggested Net Price, \$7.95

MASTER PHOTO LAYOUT KIT

This kit offers materials which eliminate inking and lettering. Use of mechanical negatives and pressure-sensitive conductor strip and termination circle tapes enable the draftsman to produce professional etched circuit artwork in less than half the time needed with conventional methods.

Finished art may be used directly as a negative or positive when made to 1:1 scale, or produced at 2:1 or 4:1 scale and photographically reduced to desired size.

Materials provided, which will make four pieces of master artwork, 18" x 24" in size, include generous amounts of conductor strips and termination circles in a variety of widths and diameters, matte surface mylar, mechanical negatives, mylar master layout grid sheet, graph paper, sheet of pressure-sensitive black opaque nomenclature characters in several fonts and sizes, assortment of good quality drafting tools and complete instructions.

CAT. NO. PL-200A — Master Photo Layout Kit. Wt., 4 lbs.

Suggested Net Price, \$38.95

BASIC PHOTO LAYOUT KIT

CAT. NO. PL-2A — Materials for two pieces of 8" x 10" artwork. No tools in kit. Wt., 1 lb.

Suggested Net Price, \$3.95

(A complete selection of photo layout materials and tools is listed on page 394)

ETCHED CIRCUIT KITS

PHOTO REVERSING KIT

With this kit, you can prepare line negatives or positives from taped or inked artwork in just two simple steps. Use, also, to reverse existing negatives or positives. Photosensitized film is contact exposed, then simply wiped with developing solution. No darkroom, tanks, trays or fixing required.

Kit includes two pieces of reversing film, 10" x 24", developing solution, cotton pads and complete instructions.

CAT. NO. FK-701 — Photo Reversing Kit. Wt., 1 lb., 8 oz.
Suggested Net Price, \$7.20

ETCHED CIRCUIT LAB KITS

The most complete etched circuit kits available. Only water, electricity and time are needed to produce more than three square feet of single and double clad boards. Parts up to 7" x 10" in size may be made by both manual and photo resist methods.

The KEPRO Lab Kits, designed for the industrial design engineer or serious experimenter, offer materials and equipment to span a range from single breadboard to short run production of high quality photo-processed boards. A KEPRO PL-2A Photo Layout Kit is included for fast, simple artwork preparation. The photosensitized copper clad materials can be handled in subdued ambient room light — no darkroom needed. Laminates are $\frac{1}{16}$ " thick, clad with one ounce copper.

Kits include 20 pieces of plain and photosensitized copper clad boards in assorted sizes up to 7" x 10", exposure lamp, trays, chemicals and full instructions.

CAT. NO. L-505A — Etched Circuit Lab Kit with XXXP Paper Base Phenolic Boards. Wt., 20 lbs.

Suggested Net Price, \$34.75

CAT. NO. L-505A-G — Etched Circuit Lab Kit with G-10 Glass Epoxy Boards. Wt., 21 lbs.

Suggested Net Price, \$42.95

PHOTO SCREEN KIT

An outstanding feature of this popular KEPRO kit is the very complete instructions that fully explain the art of silk screen production and printing. Although ideal for hobbyists, material and equipment in this kit are of professional type and quality and the assembled screen printer can be used to produce up to 1000 impressions per day for short-run production requirements.

Kit includes 10" x 12" wood frame with stretched silk, two additional silks, film emulsion for three photo stencils, frame mounting hinges, squeegee, film exposure frame, photoflood lamp, developing chemicals and trays, thermometer and both black and white screening inks.

CAT. NO. SC-601A — Photo Screen Kit. Wt., 25 lbs.

Suggested Net Price, \$35.00

NAMEPLATE AND PANEL KITS

Produce professional-appearing nameplates and panels as they are needed. Prototyping engineers can dress up their "black boxes" for presentation. Hams and experimenters can customize home-built gear. No darkroom needed. Each kit supplied with pressure-sensitive opaque nomenclature letters and numbers plus clear acetate sheets to make sharp, clear film positives. Finished plates are mounted with double-face adhesive tape, supplied.

BLUE ENAMEL

Sensitized blue aluminum plate is exposed through film positive. In development, the unexposed areas masked by the opaque characters are washed away. The result is sharply detailed aluminum nomenclature on attractive blue background. Complete instructions and everything needed to process 160 square inches of plate. Two 8" x 10" sensitized plates in kit.

CAT. NO. NP-303A — Blue Enamel Nameplate and Panel Kit. Wt., 1 lb.

Suggested Net Price, \$7.25

BLACK ANODIZED

Photosensitive black anodized aluminum panels are exposed through film positives. Areas receiving light become insoluble to developing solution and remain on panel surface to form etch resist. When etched, high contrast aluminum and black panels result. Kit includes full instructions and all materials to produce three 3" x 6" panels (54 square inches).

CAT. NO. NP-404 — Black Anodized Nameplate and Panel Kit. Wt., 1 lb., 8 oz.

Suggested Net Price, \$6.55
